Absorption Spectra
Absorption bands and lines in irradiated LiF, Charles J. Delbecq and Peter Pringsheim—794
Absorption band-systems of SiO and GeO in the Schumann region, H. C. Rowlinson and R. F. Barrow—378(L)
Absorption coefficients of gases in the vacuum ultraviolet, Part II. Nitrous oxide, Murray Zelikoff, K. Watanabe, and Edward C. Y. Inn—1643
Absorption coefficients of gases in the vacuum ultraviolet. Part III. CO_2, Edward C. Y. Inn, K. Watanabe, and Murray Zelikoff—1648
Absorption coefficients of gases in the vacuum ultraviolet. Part IV. Ozone, Yoshio Tanaka, Edward C. Y. Inn, and K. Watanabe—1651
Absorption coefficients of oxygen in the vacuum ultraviolet, K. Watanabe, Edward C. Y. Inn, and Murray Zelikoff —1026
Absorption in the low-frequency wing of the NH_3 inversion spectrum, G. Birnbaum and A. A. Maryott—1774
Absorption of 3.3 cm microwaves in chloroform and ethylene dichloride in the liquid state, S. C. Sirkar and D. K. Ghosh—1614(L)
Absorption spectra of free radicals in continuously irradated photochemical systems, D. A. Ramsay—165(L)
Absorption spectrum of cyclopropane in the vacuum ultraviolet. Note on the absorption spectrum of methyl cyclopropane, Paul Wagner and A. B. F. Duncan—516
Absorption spectrum of free HCO radicals, D. A. Ramsey —960(L)
Analysis of the spectrum of the Nd^{+++} ion in the bromate crystal, Robert A. Satten—637
Application of a fast-scanning infrared spectrometer to a kinetic study of the $NO_2-C_2H_5OH$ reaction, Richard E. Nightingale, George R. Cowan, and Bryce Crawford, Jr. —1398(L)
Application of perturbation theory to the *F* and *G* matrix method of calculating molecular vibration frequencies, P. W. Higgs—1131
Approximate calculation of the benzene self-complex interaction energy at high pressure, Kurt E. Shuler—765(L)
Assignments of the Raman and infrared frequencies of 1,2-dichloroethane observed in the gaseous, liquid, and solid states, Ichiro Nakagawa and San-Ichiro Mizushima— 2195
Asymmetric rotor. XI. Hydrogen sulfide absorption in the regions 8700 cm^{-1} and 11 000 cm^{-1}, K. Keith Innes, Paul C. Cross, and Edward J. Bair—545
Bipyramidal XY_5 molecular model. Part I. Classical vibration problem, Joseph S. Ziomek and Cecil B. Mast—862
Bond moments and derivatives in CF_4, SiF_4, and SF_6 from infrared intensities, P. N. Schatz and D. F. Hornig—1516
Centrifugal distortion effects in methyl chloride, Tsu-Shen Chang and David M. Dennison—1293(L)
Chemical modulation: A method for investigating transient molecules, Edward J. Bair, John T. Lund, and Paul C. Cross—759(L)
Conjugation and the intensity of the infrared carbonyl band, Gordon M. Barrow—2008
Contribution to the theory of light absorption of symmetrical polymethine dyes, Kenichi Fukui, Chikayoshi Nagata, and Teijiro Yonezawa—186(L)
Correlation between photoconductance and ultraviolet spectrum of anthracene crystals, D. J. Carswell—1890(L)
Effect of pressure and temperature on the absorption spectrum of benzene in the near ultraviolet, S. Sambursky, A. Halperin, and H. Henig—2041
Effects of vibrational state on rotational intensity distributions in OH, A. M. Bass and H. P. Broida—173(L)
Electric dipole moments of several molecules from the stark effect, S. N. Ghosh, Ralph Trambarulo, and Walter Gordy—308
Electron-diffraction and microwave investigation of tertiary butyl fluoride, Flemming Andersen, John Rastrup Andersen, Borge Bak, Otto Bastiansen, Eilif Risberg, and Lise Smedvik—373(L)
Electronic structure of ferrocene, H. H. Jaffé—156
Equilibria involving the CF(*g*) and CF_2(*g*) radicals at high temperature, John L. Margrave and Karl Wieland—1552
Even-odd character of the 2900–3200Z absorption transition in naphthalene, Harden McConnell and Donald S. McClure—1296(L)

Absorption Spectra (continued)
Evidence for one-dimensional rotation in ammonium iodide, R. C. Plumb and D. F. Hornig—366(L)
Evidence for one-dimensional rotation in NH_4I, R. C. Plumb and D. F. Hornig—1113(L)
Excited electronic state of the 2600A transition in benzene, A. C. Albrecht and W. T. Simpson—940(L)
Existence of a hidden transition in biphenyl, Anneliese Wenzel—403
Experimental evidence of restricted rotation in $CH_3-C\equiv C-CF_3$, Børge Bak, Lise Hansen, and John Rastrup-Andersen—1612(L)
Extension of the $N_2^+(C\rightarrow X)$ bands in the far ultraviolet region, Yoshio Tanaka—1402(L)
Far ultraviolet absorption spectra of simple alkyl amines, Eileen Tannenbaum, Esther M. Coffin, and Anna J. Harrison—311
F-bands in some mixed crystals of the alkali halides, Robert J. Gnaedinger, Jr.—323
Free-electron network model for conjugated systems. II. Numerical calculations, Charles W. Scherr—1582
Fundamental absorption bands in the infrared spectrum of phosphine, V. M. McConaghie and H. H. Nielsen—1836
Fundamental absorption bands in the infrared spectrum of stibine and deuterated stibine, W. H. Haynie and H. H. Nielsen—1839
ν_9 Fundamental of C_2F_6, D. E. Mann and Earle K. Plyler —1116(L)
Geometry of ketene, William F. Arendale and William H. Fletcher—1898(L)
Ground and excited electronic states and the molecular vibrations of some polyatomic molecules, Jules Duchesne and Louis Burnelle—2005
Hyperconjugation in $C_6H_7^+$ and other hydrocarbon ions, Lucy W. Pickett, Norbert Muller, and R. S. Mulliken —1400(L)
Importance of $\nu_{11}e_{12}$ (849) vibration of benzene in determining the structure of monosubstituted benzenes, Satya Narain Garg—1907(L)
Infrared absorption of solid N_2O_5, Roy Teranishi and J. C. Decius—1116(L)
Infrared and Raman spectra of dicyanoacetylene, Foil A. Miller and Roy B. Hannan—110
Infrared and Raman spectra of fluorinated ethanes. V. The series CF_3CF_3, CF_3CF_2Cl, CF_3CFCl_2, and CF_3CCl_3, J. Rud Nielsen C. Y. Liang, and R. M. Smith—383
Infrared and Raman spectra of fluorinated ethanes. VI. The series CF_3CH_3, CF_3CH_2, Cl, CF_3CHCl_2, and CF_3CCl_3, J. Rud Nielsen, C. Y. Liang, and D. C. Smith—1060
Infrared and Raman spectra of fluorinated ethanes. VII. CCl_3CF_2Cl and CCl_3CFCl_2, J. Rud Nielsen, C. Y. Liang, D. C. Smith, and Morris Alpert—1070
Infrared and Raman spectra of SiH_2Cl_2, Janet A. Hawkins and M. Kent Wilson—360
Infrared and Raman spectra of tetramethylmethane-d_{12}, E. R. Shull, T. S. Oakwood, and D. H. Rank—2024
ν_2 infrared band in gaseous fluoroform, Walter F. Edgell and Charles May—1901(L)
Infrared intensity measurements on nitric oxide, hydrogen chloride, and hydrogen bromide, S. S. Penner and D. Weber—649
Infrared spectra and structure of uranyl and transuranium (V) and (VI) ions in aqueous perchloric acid solution, Llewellyn H. Jones and Robert A. Penneman—542
Infrared spectra and the molecular structure of pyramidal molecules, Harald H. Nielsen—142
Infrared spectra of HCl, DCl, HBr, and NH_3 in the region from 40 to 140 microns, R. L. Hansler and R. A. Oetjen —1340
Infrared spectra of oriented rhombic sulfur crystals with polarized radiation, Gordon M. Barrow—219
Infrared spectra of solutions of iodine, D. L. Glusker, H. W. Thompson and R. S. Mulliken—1407(L)
Infrared spectra of tetranitromethane, P. H. Lindenmeyer and P. M. Harris—408
Infrared spectra of the methyl chlorosilanes, A. Lee Smith —1997
Infrared spectra of three solid phases of methyl ammonium chloride, R. D. Waldron—734
Infrared spectroscopic study of the carbonyl stretching frequency in a group of *ortho*- and *para*-quinones, Marie-Louise Josien, Nelson Fuson, Jeanne-Marie Lebas, and Thomas M. Gregory—331
Infrared spectrum of dimethyltriacetylene, Alfons Weber, Salvador Ferigle, and Forrest F. Cleveland—1613(L)
Infrared spectrum and molecular constants of $C^{14}O_2$, Alvin H. Nielsen and Robert T. Lagemann
Infrared spectrum of CF_3D, Santiago R. Polo and M. Kent Wilson—1129
Infrared spectrum of fluoroform from 2.2 to 20μ, H. D. Rix —1077
Infrared spectrum of the H_3O^+ ion in acid hydrates, D. E. Bethell and N. Sheppard—1421(L)
Interaction with molecular rotation of the nuclear electric quadrupole moments of two nuclei having spins $\frac{3}{2}$, G. Wilse Robinson and C. D. Cornwell—1436
Interpretation of infrared dichroism in fibrous protein structures, R. D. B. Fraser—1511
Investigation of rotational isomers with ultrasound, John Karpovich—1120(L)
K fine structure in the $2\nu_1$ band of CHD_3, T. A. Wiggins, E. R. Shull, Jean M. Bennett, and D. H. Rank—1940
(K+2)nd order formula for asymmetry doublets in rotational spectra, Daniel Kivelson—536
LCAO self-consistent field calculations of the π-electrons energy levels and electronic structure of fulvene, Gaston Berthier—953(L)
Low-temperature spectroscopy in the farther ultraviolet region, W. J. Potts, Jr.—191
Mean amplitudes of thermal vibrations in polyatomic molecules. II. An approximate method for calculating mean square amplitudes, Yonezo Morino, Kôzo Kuchitsu, Akira Takashi, and Keiji Maeda—1927
Methyl alcohol molecule and its microwave spectrum, Eugene V. Ivash and David M. Dennison—1804
Microwave investigation of pyridine, Børge Bak and John Rastrup-Andersen—1305(L)
Microwave spectra and molecular structures of $HSiCl_3$, CH_3SiCl_3, and $(CH_3)_3SiCl$, Richard C. Mockler, Jep H. Bailey, and Walter Gordy—1710
Microwave spectrum and dipole moment of ethylenimine, Russell D. Johnson, Rollie J. Myers, and William D. Gwinn—1425(L)
Microwave spectrum and general properties of ethylene imine, W. S. Wilcox, K. C. Brannock, W. DeMore, and J. H. Goldstein—563(L)
Microwave spectrum and molecular structure of trichloro germane, Putcha Venkateswarlu, Richard C. Mockler, and Walter Gordy—1713
Microwave spectrum and structure of chlorine trifluoride, D. F. Smith—609
Microwave spectrum and structure of ozone, Richard H. Hughes—959(L)
Microwave spectrum and structure of SiD_3Cl, Børge Bak, Jørgen Bruhn, and John Rastrup-Andersen—753(L)
Microwave spectrum and structure of SiD_3F, Børge Bak, Jørgen Bruhn, and John Rastrup-Andersen—752(L)
Microwave spectrum of arsenic trifluoride, P. Kisliuk and S. Geschwind—828
Microwave spectrum of $C_8H_{13}Br$ and $C_8H_{13}Cl$, A. H. Nethercot, Jr., and A. Javan—363
Microwave spectrum of HDO, D. W. Posener and M. W. P. Strandberg—1401(L)

Microwave spectrum of phosgene, G. Wilse Robinson—1741
Microwave spectrum of pyridine, K. E. McCulloh and Gilbert F. Pollnow—2082(L)
Molecular structure, dipole moment, and g factor of ozone from its microwave spectrum, R. Trambarulo, S. N. Ghosh, C. A. Burrus, Jr., and W. Gordy—851
Natural hypsochromic shifts on phenyl substitution, B. Pullman, G. Berthier, and J. Baudet—188(L)
New electronic state in benzene, Joe S. Ham—756(L)
New infrared-investigations in the *cis-trans* isomerism of *ortho*-halogenphenols, G. Rossmy, W. Lüttke, and R. Mecke—1606(L)
Normal coordinate analysis of CF_3CH_3 based on a Urey-Bradley potential function, Chi Yuan Pan and J. Rud Nielsen—1426(L)
Normal coordinate analysis of nonplanar vibrations of 1,3,5-trifluorobenzene, Eldon Ferguson—886
Note on some regularities of the absorption band maxima of colored alkali metal halides, A. Glasner and F. C. Tompkins—1817
Note on the absorption spectrum of iodine in oxygenated solvents and the dissociation of iodine water, Leonard I. Katzin—490
Note on the infrared absorption of the flame of a simple double-base powder, Horace F. White, George R. Cowan, David Rotenberg, and Bryce Crawford, Jr.—1309(L)
Note on the vibrational spectra of $SiHCl_3$, SiH_2Cl_2, and SiH_2Br_2, Janet A. Hawkins, Santiago R. Polo, and M. Kent Wilson—1122(L)
Optical absorption of sulfur, A. M. Bass—80
Optical properties of natural and synthetic hackmanite, David B. Medved—1309(L)
Out-of-plane deformation frequency of the NH group in the peptide link, H. K. Kessler and G. B. B. M. Sutherland—570(L)
Ozone band at 1110 cm^{-1}, J. N. Howard and J. H. Shaw —558(L)
PH_2D and PHD_2 rotational lines in the region between 50 and 100 K, Richard E. Stroup and Robert A. Oetjen —2092(L)
Photochemical decomposition of benzene, G. E. Gibson, Norman Blake and Max Kalm—1000
Polarized infrared spectrum of $KAu(CN)_2$, Llewellyn H. Jones—1891(L)
Possible microwave absorption in the molecules belonging to the point groups $D_{2d} \equiv V_d$ and T_d, Masataka Mizushima and Putcha Venkateswarlu—705
Potential function of ethylene, Bryce L. Crawford, Jr., John E. Lancaster, and Richard G. Inskeep—678
Pre-ignition and flame spectra in the self-combustion of acetylene, Wm. W. Robertson, N. B. Humphrey, and Robbin C. Anderson—2093(L)
Preliminary analysis of the microwave spectrum of ethylenimine, T. E. Turner, Verna C. Fiora, W. M. Kendrick, and B. L. Hicks—564(L)
Preliminary work on the microwave spectrum of acetic acid, J. H. N. Loubser—2231(L)
Presence of free chlorine in sodium chloride crystals containing color centers and color center precursors, Michael Hacskaylo, Dumas Otterson, and Philip Schwed—1434
Presence of free sodium in sodium chloride crystals containing color centers and color center precursors, Michael Hacskaylo and Dumas Otterson—552
Quantitative studies of apparent rotational temperatures of OH in emission and absorption (Spectral lines with Doppler contour), S. S. Fenner—31
Raman and infrared spectral data, assignments, potential constants, and calculated thermodynamic properties for oxalyl chloride, Joseph S. Ziomek, Arnold G. Meister, Forrest F. Cleveland, and Charlotte E. Decker—90
Regularities in the spectra of molecular complexes, H. McConnell, J. S. Ham, and J. R. Platt—66
Rotational isomerism in chloroacetone, San-Ichiro Mizushima, Takehiko Shimanouchi, Tatsuo Miyazawa, Isao Ichishima, Kenji Kuratani, Ichiro Nakagawa, and Nobuhiko Shido—815
Rotational line-width measurements on NO, HCl, and HBr, D. Weber and S. S. Penner—1503
Rotational spectrum of ND_3 between 60 and 200 K, Richard E. Stroup, Robert A. Oetjen, and Ely E. Bell —2072(L)
Rotation vibration bands of some symmetric top molecules under high resolution, T. A. Wiggins, E. R. Shull, and D. H. Rank—1368
Rotation-vibration spectra of diatomic and simple polyatomic molecules with long absorbing paths, A. E. Douglas and D. Sharma—448
Rotation-vibration spectra of diatomic and simple polyatomic molecules with long absorbing paths. X. Spectrum of tri-deuteromethane in photographic infrared, L. F. H. Bovey—831
Semi-empirical theory of electronic spectra and electronic structure of complex unsaturated molecules. II, Rudolph Pariser and Robert G. Parr—767
Solution absorption spectra of americium (III), (V), and (VI), S. E. Stephanou, J. P. Nigon, and R. A. Penneman —42
Some absorption bands in the far infrared, J. Kenneth O'Loane—669
Some heavy water rotational absorption lines, C. K. Jen, D. R. Bianco, and J. T. Massey—520
Some new data on the $NO-N_2O_5$ reaction, George R. Cowan, David Rotenberg, Arthur Downie, Bryce Crawford, Jr., and R. A. Ogg, Jr.—1397(L)
Some optical properties of potassium iodide-thallium phosphors, Philip H. Yuster and Charles J. Delbecq—892
Specific influence of solvents on the infrared spectra of alcohols, Alexander Verrijn Stuart—1115(L)
Spectra of *p*-fluorobenzonitrile in the near ultraviolet, C. Dewey Cooper—379(L)
Spectrometer for the far infrared and the spectrum of 1,2 dichloroethane, C. R. Bohn, N. K. Freeman, William D. Gwinn, J. L. Hollenberg, and Kenneth S. Pitzer—719
Strong hydrogen bonds in crystals, R. C. Lord and R. E. Merrifield—166(L)
Structure of HNCS from microwave spectra, G. C. Dousmanis, T. M. Sanders, Jr., C. H. Townes, and H. J. Zeiger—1416(L)
Structure of phosphine, Marshall H. Sirevitz and Ralph E. Weston, Jr.—898
Structure of oxalyl chloride, R. E. Kagarise—1615(L)
Studies by infrared spectra on the initiation process in autoxidation of methyl linolenate, N. A. Khan—952(L)
Studies of ionization efficiency. Part III. The detection and interpretation of fine structure, J. D. Morrison—1767
Study of the infrared spectrum of the amide group, Harry Letaw, Jr., and Armin H. Gropp—1621
Substituted methanes. X. Infrared spectral data, assignments, potential constants, and calculated thermodynamic properties for CF_3Br and CF_3I, Paul R. McGee, Forrest F. Cleveland, Arnold G. Meister, Charlotte E. Decker, and Sidney I. Miller—242
Substituted methanes. XI. Potential constants for CBr_3Cl, Arnold G. Meister and Fred L. Voelz—158
Substituted methanes. XIII. Infrared spectral data and assignments for dibromodifluoromethane, Charlotte E. Decker, Forrest F. Cleveland, and Richard B. Bernstein —189(L)

Absorption Spectra (continued)
Substituted methanes. XIV. Vibrational spectra, potential constants, and calculated thermodynamic properties of bromochloromethane, Alfons Weber, Arnold G. Meister, and Forrest F. Cleveland—930
Substituted methanes. XV. Infrared spectral data, assignments, and calculated thermodynamic properties for fluorotrichloromethane, Richard B. Bernstein, James P. Zietlow, and Forrest F. Cleveland—1778
Substituted methanes. XIX. C^{13} isotopic shifts in the vibrational spectrum of methanol, Richard B. Bernstein, James E. Lamport, and Forrest F. Cleveland—1903(L)
Sum rule for the vibrational frequencies of homologs, H. J. Bernstein and A. D. E. Pullin—2188
Symmetry assignments for the first two excited singlet electronic states of the napthalene molecule, Otto Schnepp and Donald S. McClure—959(L)
Symmetry factoring of the kinetic and potential energy matrices, Bryce Crawford, Jr.—1108
Synthesis of cyclobutene-d_6 and cyclobutane-d_8, R. C. Lord —378(L)
System pyridine-pyrrole and hydrogen bonding, Robert H. Linnell—179(L)
Temperature dependence of the naphthalene bands at 3200–2900A, R. H. Knipe, H. Sponer, and C. D. Cooper—376(L)
Temperature dependence of the optical absorption of β-$A_{g2}S$, Kurt Lehovec—54
Theory of the rotational spectra of Allene-type molecules, Masataka Mizushima—1222
Theory of Stark effect of asymmetric rotator with hyperfine structure, Masataka Mizushima—539
Thermal equilibrium between *F* centers and *M* centers in alkali halides, William A. Smith and Allen B. Scott—2096(L)
Triplet states in solution, George Porter and Maurice W. Windsor—2088(L)
Two new lines in the microwave spectrum of heavy water, Harry D. Crawford—2099(L)
Ultraviolet absorption spectra of derivatives of symmetric triazine. I. Amino triazines, Robert C. Hirt and D. J. Salley—1181
Ultraviolet absorption spectra of uninegative ions, Harold L. Friedman—319
Vibrational spectra and structure of ferrocene and ruthenocene, Ellis R. Lippincott and Richard D. Nelson—1307(L)
Vibrational spectra and structure of nitrogen tetrasulfide, Ellis R. Lippincott and Marvin C. Tobin—1559
Vibrational spectra of fluorinated aromatics. III. 1,4-difluorobenzene, E. E. Ferguson, R. L. Hudson, J. Rud Nielsen, and D. C. Smith—1457
Vibrational spectra of fluorinated aromatics. IV. 1,2,4,5-tetrafluorobenzene E. E. Ferguson, R. L. Hudson, J. Rud Nielsen, and D. C. Smith—1464
Vibrational spectra of fluorinated aromatics. V. 1,3-difluorobenzene, E. E. Ferguson, R. L. Collins, J. Rud Nielsen, and D. C. Smith—1470
Vibrational spectra of fluorinated aromatics. VI. Fluorobenzene, D. C. Smith, E. E. Ferguson, R. L. Hudson, and J. Rud Nielsen—1475
Vibrational spectra of fluorinated aromatics. VII. 1,2,4-trifluorobenzene, E. E. Ferguson, R. L. Hudson, J. Rud Nielsen, and D. C. Smith—1727
Vibrational spectra of fluorinated aromatics. VIII. 1,4-bis-(trifluoromethyl) benzene, E. E. Ferguson, Louis Mikkelsen, J. Rud Nielsen, and D. C. Smith—1731
Vibrational spectra of fluorinated aromatics. IX. *p*-fluorotoluene, E. E. Ferguson, R. L. Hudson, J. Rud Nielsen, and D. C. Smith—1736
Vibrational spectra of pyridine and pyridine-d_5, Lester Corrsin, B. J. Fax, and R. C. Lord—1170
Vibrational spectrum of chlorotrifluoroethylene, D. E. Mann, N. Acquista, and Earle K. Plyler—1949
Vibration frequencies of halogenated methanes and substitution product rule, Kenneth S. Pitzer and Edward Gelles—855
Vibration-rotation spectrum of D_2O, W. S. Benedict, Norman Gailar, and Earle K. Plyler—1301(L)
Vibration-rotation spectrum of HDO, W. S. Benedict, Norman Gailar, and Earle K. Plyler—1302(L)
Infrared of
β-$A_{g2}S$, Kurt Lehovec—54
Alcohols, Alexander Verrijn Stuart—1115(L)
Allene-type molecules, Masataka Mizushima—1222
Amide group, Harry Letaw, Jr., and Armin H. Gropp—1621
Asymmetric rotator, Masataka Mizushima—539
Bipyramidal XY_5 molecular model. Part I. Classical vibration problem, Joseph S. Ziomek and Cecil B. Mast—862
Bromochloromethane, Alfons Weber, Arnold G. Meister, and Forrest F. Cleveland—930
Carbonyl, Gordon M. Barrow—2008
Carbonyl in *ortho* and *para* quinones, Marie-Louise Josien, Nelson Fuson, Jeanne-Marie Lebas, and Thomas M. Gregory—331
CBr_3Cl, Arnold G. Meister and Fred L. Voelz—158
CCl_3CF_2Cl and CCl_3CFCl_2, J. Rud Nielsen, C. Y. Liang, D. C. Smith, and Morris Alpert—1070
CF_3Br and CF_3I, Paul R. McGee, Forrest F. Cleveland, Arnold G. Meister, Charlotte E. Decker, and Sidney I. Miller—242
C_2F_6, D. E. Mann and Earle K. Plyler—1116(L)
CF_3CF_3, CF_3CF_2Cl, CF_3CFCl_2, and CF_3CCl_3, J. Rud Nielsen, C. Y. Liang, and R. M. Smith—383
CF_3CH_3, Chi Yuan Pan and J. Rud Nielsen—1426(L)
CF_3CH_3, CF_3CH_2, Cl, CF_3CHCl_2, and CF_3CCl_3, J. Rud Nielsen, C. Y. Liang, and D. C. Smith—1060
CF_3D, Santiago R. Polo and M. Kent Wilson—1129
CF_4, SiF_4, and SF_6, P. N. Schatz and D. F. Hornig—1516
CHD_3, T. A. Wiggins, E. R. Shull, Jean M. Bennett, and D. H. Rank—1940
Chloroacetone, San-Ichiro Mizushima, Takehiko Shimanouchi, Tatsuo Miyazawa, Isao Ichishima, Kenji Kuratani, Ichiro Nakagawa, and Nobuhiko Shido—815
Methyl chlorosilanes, A. Lee Smith—1997
Chlorotrifluoroethylene, D. E. Mann, N. Acquista, and Earle K. Plyler—1949
Cis-dichloroethylene, *trans*-dichloroethylene, phosphorus trichloride, *trans*- and "*gauche*"-1,2 dichloroethane, propylene, acetaldehyde, methyl alcohol and carbon suboxide, J. Kenneth O'Loane—669
$C^{14}O_2$, Alvin H. Nielsen and Robert T. Lagemann
Fluorobenzene, D. C. Smith, E. E. Ferguson, R. L. Hudson, and J. Rud Nielsen—1475
Diatomic and simple polytomic molecules, A. E. Douglas and D. Sharma—448
Dibromodifluoromethane, Charlotte E. Decker, Forrest F. Cleveland, and Richard B. Bernstein—189(L)
1,2 dichloroethane, C. R. Bohn, N. K. Freeman, William D. Gwinn, J. L. Hollenberg, and Kenneth S. Pitzer—719
1,2-dichloroethane, Ichiro Nakagawa and San-Ichiro Mizushima—2195
Dicyanoacetylene, Foil A. Miller and Roy B. Hannan—110
1,3-difluorobenzene, E. E. Ferguson, R. L. Collins, J. Rud Nielsen, and D. C. Smith—1470
1,4-difluorobenzene, E. E. Ferguson, R. L. Hudson, J. Rud Nielsen, and D. C. Smith—1457
Dimethyltriacetylene, Alfons Weber, Salvador Ferigle, and Forrest F. Cleveland—1613(L)

D_2O, W. S. Benedict, Norman Gailar, and Earle K. Plyler —1301(L)
Double-base powder, Horace F. White, George R. Cowan, David Rotenberg, and Bryce Crawford, Jr.—1309(L)
Ethylene, Bryce L. Crawford, Jr., John E. Lancaster, and Richard G. Inskeep—678
Ferrocene and ruthenocene, Ellis R. Lippincott and Richard D. Nelson—1307(L)
Fluoroform, Walter F. Edgell and Charles May—1901(L)
Fluoroform, H. D. Rix—1077
p-fluorotoluene, E. E. Ferguson, R. L. Hudson, J. Rud Nielsen, and D. C. Smith—1736
Fluorotrichloromethane, Richard B. Bernstein, James P. Zietlow, and Forrest F. Cleveland—1778
Halogenated methanes, Kenneth S. Pitzer and Edward Gelles—855
HCl, DCl, HBr and NH_3, R. L. Hansler and R. A. Oetjen —1340
HDO, W. S. Benedict, Norman Gailar, and Earle K. Plyler —1302(L)
H_3O^+, D. E. Bethell and N. Sheppard—1421(L)
Hydrogen bonds, R. C. Lord and R. E. Merrifield—166(L)
Hydrogen sulfide, K. Keith Innes, Paul C. Cross, and Edward J. Bair—545
Iodine, D. L. Glusker, H. W. Thompson and R. S. Mulliken —1407(L)
$KAu(CN)_2$, Llewellyn H. Jones—1891(L)
Ketene, William F. Arendale and William H. Fletcher—1898(L)
Methanol, Richard B. Bernstein, James E. Lamport, and Forrest F. Cleveland—1903(L)
Methyl ammonium chloride, R. D. Waldron—734
Methyl chloride, Tsu-Shen Chang and David M. Dennison —1293(L)
Methyl linolenate, N. A. Khan—952(L)
ND_3, Richard E. Stroup, Robert A. Oetjen, and Ely E. Bell —2072(L)
NH group in the peptide link, H. K. Kessler and G. B. B. M. Sutherland—570(L)
NH_4I, R. C. Plumb and D. F. Hornig—1113(L)
Nitric oxide, hydrogen chloride, and hydrogen bromide, S. S. Penner and D. Weber—649
Nitrogen tetrasulfide, Ellis R. Lippincott and Marvin C. Tobin—1559
N_2O_5, Roy Teranishi and J. C. Decius—1116(L)
$NO_2-C_2H_5OH$, Richard E. Nightingale, George R. Cowan, and Bryce Crawford, Jr.—1398(L)
$NO-N_2O_5$, George R. Cowan, David Rotenberg, Arthur Downie, Bryce Crawford, Jr., and R. A. Ogg, Jr.—1397(L)
OH, A. M. Bass and H. P. Broida—173(L)
OH, S. S. Penner—31
Ortho-halogenphenols, G. Rossmy, W. Lüttke, and R. Mecke—1606(L)
Oxalyl chloride, R. E. Kagarise—1615(L)
Oxalyl chloride, Joseph S. Ziomek, Arnold G. Meister, Forrest F. Cleveland, and Charlotte E. Decker—90
Ozone, J. N. Howard and J. H. Shaw—558(L)
Paraffin crystals, R. S. Stein and G. B. B. M. Sutherland, 370(L)
PH_2D and PHD_2, Richard E. Stroup and Robert A. Oetjen —2092(L)
Phosphine, V. M. McConaghie and H. H. Nielsen—1836
Pyridine, K. E. McCulloh and Gilbert F. Pollnow—2082(L)
Pyridine and pyridine-d_5, Lester Corrsin, B. J. Fax, and R. C. Lord—1170
Pyridine-pyrrole, Robert H. Linnell—179(L)
Quartz, cristobalite, and vitreous silica, I. Simon and H. O. McMahon—23
Rotational isomers, John Karpovich—1120(L)
SiH_3Cl_2, Janet A. Hawkins and M. Kent Wilson—360
$SiHCl_3$, SiH_3Cl_2, and SiH_2Br_2, Janet A. Hawkins, Santiago R. Polo, and M. Kent Wilson—1122(L)
Stibine and deuterated stibine, W. H. Haynie and H. H. Nielsen—1839
Sulfur, Gordon M. Barrow—219
Symmetric top molecules, T. A. Wiggins, E. R. Shull, and D. H. Rank—1368
Synthesis of cyclobutene-d_6 and cyclobutane-d_8, R. C. Lord—378(L)
1,2,4,5-tetrafluorobenzene, E. E. Ferguson, R. L. Hudson, J. Rud Nielsen, and D. C. Smith—1464
Tetramethylmethane-d_{12}, E. R. Shull, T. S. Oakwood, and D. H. Rank—2024
Tri-deuteromethane, L. F. H. Bovey—831
1,2,4-trifluorobenzene, E. E. Ferguson, R. L. Hudson, J. Rud Nielsen, and D. C. Smith—1727
1,3,5-trifluorobenzene, Eldon Ferguson—886
1,4-bis(trifluoromethyl) benzene, E. E. Ferguson, Louis Mikkelsen, J. Rud Nielsen, and D. C. Smith—1731
Uranyl and transuranium (V) and (VI) ions, Llewellyn H. Jones and Robert A. Penneman—542
Microwave of
Acetic acid, J. H. N. Loubser—2231(L)
Arsenic trifluoride, P. Kisliuk and S. Geschwind—828
$C_8H_{12}Br$ and $C_8H_{13}Cl$, A. H. Nethercot, Jr. and A. Javan —363
$CH_3-C\equiv C-CF_3$, Børge Bak, Lise Hansen, and John Rastrup-Andersen—1612(L)
Chlorine trifluoride, D. F. Smith—609
Chloroform and ethylene dichloride, S. C. Sirkar and D. K. Ghosh—1614(L)
Ethylene imine, W. S. Wilcox, K. C. Brannock, W. De-More, and J. H. Goldstein—563(L)
Ethylenimine, Russell D. Johnson, Rollie J. Myers, and William D. Gwinn—1425(L)
Ethylenimine, T. E. Turner, Verna C. Fiora, W. M. Kendrick, and B. L. Hicks—564(L)
HDO, D. W. Posener and M. W. P. Strandberg—1401(L)
Heavy water, Harry D. Crawford—2099(L)
Heavy water, C. K. Jen, D. R. Bianco, and J. T. Massey —520
HNCS, G. C. Dousmanis, T. M. Sanders, Jr., C. H. Townes, and H. J. Zeiger—1416(L)
$HSiCl_3$, CH_3SiCl_3, and $(CH_3)_3SiCl$, Richard C. Mockler, Jep H. Bailey, and Walter Gordy—1710
Methyl alcohol, Eugene V. Ivash and David M. Dennison —1804
Molecules belonging to the point groups $D_{2d}\equiv V_d$ and T_d, Masataka Mizushima and Putcha Venkateswarlu—705
NF_3, PF_3, POF_3, HCN, CH_3CN, CH_3NC, CH_3F, CH_3CCH, SiF_3H, S. N. Ghosh, Ralph Trambarulo, and Walter Gordy—308
NH_3, G. Birnbaum and A. A. Maryott—1774
Ozone, Richard H. Hughes—959(L)
Ozone, R. Trambarulo, S. N. Ghosh, C. A. Burrus, Jr., and W. Gordy—851
Phosgene, G. Wilse Robinson—1741
Phosphine, Marshall H. Sirevitz and Ralph E. Weston, Jr. —898
Pyridine, Børge Bak and John Rastrup-Andersen—1305(L)
SiD_3Cl, Børge Bak, Jørgen Bruhn, and John Rastrup-Andersen—753(L)
SiD_3F, Børge Bak, Jørgen Bruhn, and John Rastrup-Andersen—752(L)
Tertiary butyl fluoride, Flemming Andersen, John Rastrup Andersen, Børge Bak, Otto Bastiansen, Eilif Risberg, and Lise Smedvik—373(L)
Trichloro germane, Putcha Venkateswarlu, Richard C. Mockler, and Walter Gordy—1713

Absorption Spectra (*continued*)
Of Crystals
Absorption bands and lines in irradiated LiF, Charles J. Delbecq and Peter Pringsheim—794
Analysis of the spectrum of the Nd^{+++} ion in the bromate crystal, Robert A. Satten—637
Evidence for one-dimensional rotation in ammonium iodide, R. C. Plumb and D. F. Hornig—366(L)
Excited electronic state of the 2600A transition in benzene, A. C. Albrecht and W. T. Simpson—940(L)
Infrared absorption of solid N_2O_5, Roy Teranishi and J. C. Decius—1116(L)
Infrared spectra of oriented rhombic sulfur crystals with polarized radiation, Gordon M. Barrow—219
Infrared spectra of tetranitromethane, P. H. Lindenmeyer and P. M. Harris—408
Infrared spectra of three solid phases of methyl ammonium chloride, R. D. Waldron—734
Interaction of methylene deformation frequencies in paraffin crystals, R. S. Stein and G. B. B. M. Sutherland—370(L)
Presence of free sodium in sodium chloride crystals containing color centers and color center precursors, Michael Hacskaylo and Dumas Otterson—552
Structure of oxalyl chloride, R. E. Kagarise—1615(L)
Symmetry assignments for the first two excited singlet electronic states of the napthalene molecule, Otto Schnepp and Donald S. McClure—959(L)
Ultraviolet of
Alkyl amines, Eileen Tannenbaum, Esther M. Coffin, and Anna J. Harrison—311
Americium (III), (V), and (VI), S. E. Stephanou, J. P. Nigon, and R. A. Penneman—42
Anthracene, D. J. Carswell—1890(L)
Benzene, A. C. Albrecht and W. T. Simpson—940(L)
Benzene, G. E. Gibson, Norman Blake, and Max Kalm —1000
Benzene, Joe S. Ham—756(L)
Benzene, S. Sambursky, A. Halperin, and H. Henig—2041
Benzene, Kurt E. Shuler—765(L)
Biphenyl, Anneliese Wenzel—403
$CF(g)$ and $CF_2(g)$, John L. Margrave and Karl Wieland —1552
CO_2, Edward C. Y. Inn, K. Watanabe, and Murray Zelikoff —1648
Complex unsaturated molecules. II, Rudolph Pariser and Robert G. Parr—767
Cyclopropane and methyl cyclopropane, Paul Wagner and A. B. F. Duncan—516
Ferrocene, H. H. Jaffé—156
p-fluorobenzonitrile in the near ultraviolet, C. Dewey Cooper—379(L)
Fulvene, Gaston Berthier—953(L)
HCO, D. A. Ramsey—960(L)
Iodine, Leonard I. Katzin—490
Molecular complexes, H. McConnell, J. S. Ham, and J. R. Platt—66
N_2^+, Yoshio Tanaka—1402(L)
Naphthalene, Harden McConnell and Donald S. McClure —1296(L)
Napthalene, Otto Schnepp and Donald S. McClure—959(L)
Naphthalene, R. H. Knipe, H. Sponer, and C. D. Cooper —376(L)
Nitrous oxide, Murray Zelikoff, K. Watanabe, and Edward C. Y. Inn—1643
Oxygen, K. Watanabe, Edward C. Y. Inn, and Murray Zelikoff—1026
Potassium iodide-thallium phosphors, Philip H. Yuster and Charles J. Delbecq—892
SiO and GeO, H. C. Rowlinson and R. F. Barrow—378(L)
Sulfur, A. M. Bass—80
Uninegative ions, Harold L. Friedman—319

Accommodation Coefficients
Accommodation coefficient technique applied to a study of molecular oxygen film on tungsten, John L. Morrison and W. E. Grummitt—654
Dissociation of H_2 and N_2 on tungsten filaments, M. Farber and A. J. Darnell—172(L)
Adsorption (see **Surface Phenomena**)
Apparatus and Methods
Applications of large digital computers to calculations of microwave spectroscopy, B. L. Hicks, T. E. Turner, and W. W. Widule—564(L)
Comment on "The accuracy of the Knudsen effusion method for measuring vapor pressures," Charles I. Whitman—1407(L)
Free-electron network for conjugated systems. III. A demonstration model showing bond order and "free valence" in conjugated hydrocarbons, John R. Platt—1597
Low temperature spectroscopy in the farther ultraviolet region, W. J. Potts, Jr.—191
Method for studying gaseous disproportionation reactions of the type $nA = mB + (n-m)C$, Alan W. Searcy—2244 (L)
Spectrometer for the far infrared and the spectrum of 1,2-dichloroethane, C. R. Bohn, N. K. Freeman, William D. Gwinn, J. L. Hollenberg, and Kenneth S. Pitzer—719
Synthesis of cyclobutene-d_6 and cyclobutane-d_8, R. C. Lord—378(L)
Use of ultrasonic absorption for the determination of very rapid reaction rates at equilibrium: application to the liquid phase association of carboxylic acids, Eli Freedman —1784

Catalysis
Comments on the thermal decomposition of ozone, P. Harteck and S. Dondes—(L)
Decomposition of ozone on the surface of glass wool, P. Harteck and S. Dondes—(L)
Diffusion in porous catalysts, C. Bokhoven and J. Hoogschagen—159(L)
Electrical conductivity of chromia-alumina dehydrogenation catalyst, P. B. Weisz, C. D. Prater, and K. D. Rittenhouse —(L)
Electrical conductivity of hydrocarbon cracking catalyst, P. B. Weisz, C. D. Prater, and K. D. Rittenhouse— 2236(L)
Kinetics of the heterogeneous parahydrogen conversion, Y. L. Sandler—2243(L)
Lattice parameters and Curie points of unreduced iron catalysts, R. Westrik—2094
Some thermal reactions of the higher iron carbides, Ernst M. Cohn and L. J. E. Hoffer—354
Chemical Reactions (see **Kinetics of Reactions**)
Conductance
Calculation of temperature and pressure coefficients of conductivity and ultrasonic effect in dilute electrolytes from Onsager's theory, Sidney Barnartt—908
Correlation between photoconductance and ultraviolet spectrum of anthracene crystals, D. J. Carswell—1890(L)
Dependence of Joshi effect on electronic part of the discharge current, N. A. Ramiah, L. R. Ganesan, and K. S. Iyyangar—1160
Electrical conductivity of chromia-alumina dehydrogenation catalyst, P. B. Weisz, C. D. Prater, and K. D. Rittenhouse—2236(L)
Electrical conductivity of hydrocarbon cracking catalyst, P. B. Weisz, C. D. Prater, and K. D. Rittenhouse— 2236(L)
Electrical conductivity of some alkaline earth titanates, E. K. Weise and I. A. Lesk—801
Electronic conduction in silicon carbide, J. T. Kendall—821

Energetics of the adsorption process responsible for the Joshi effect, S. R. Mohanty—1908(L)
Influence of irradiation on discharge current in an ozonizer, S. Deb, A. K. Saha, and M. Ghosh—1486
Note on nature of conduction in liquid iron oxide and iron silicates, M. T. Simnad and G. Derge—933
Photo-ionization as an important process in a low frequency electrodeless discharge, A. P. Saxena, M. G. Bhatawdekar, and N. A. Ramaiah—365(L)
Polarization in liquid dielectrics, George Jaffé and Charlotte Z. LeMay—920
Production of Joshi effect under high-frequency electric discharge in iodine vapor, N. Subrahmanyam and N. A. Ramaiah—2233(L)
Surface photoconductivity in cadmium sulfide crystals, Richard H. Bube—1409(L)

Crystal Structure

Antiferromagnetic structure in Cr_2O_3, B. N. Brockhouse—961(L)
Crystal and molecular structure of tetraborane, Christer E. Nordman and William N. Lipscomb—1856
Crystal class of Na_2SO_4 III, D. R. Dasgupta—2097(L)
Crystal structure and lattice energy of orthorhombic hexachloroethane, Yoshio Sasada and Masao Atoji—145
Crystal structure of diethylsilanediol, and its hydroxyl groups, Masao Kakudo and Takeo Watase—167(L)
Crystal structure of $KVO_3 \cdot H_2O$, C. L. Christ, Joan R. Clark, and H. T. Evans, Jr.—1114(L)
Crystal structure of silanols and their infrared spectra, Masao Kakudo, P. Nobutami Kasai, and Takeo Watase—1894(L)
Crystal structure of the normal paraffin hydrocarbons, A. E. Smith—2229(L)
Deuterium effect on hydrogen bond distances in crystals, R. E. Rundle—937(L)
Disorder in crystalline 2,2-dinitropropane at room temperature, S. C. Abrahams—1218
Electron deficient compounds. VII. The structure of the trimethylaluminum dimer, Paul H. Lewis and R. E. Rundle—986
Evidence for one-dimensional rotation in ammonium iodide, R. C. Plumb and D. F. Hornig—366(L)
Evidence for one-dimensional rotation in NH_4I, R. C. Plumb and D. F. Hornig—1113(L)
Lattice parameters and Curie points of unreduced iron catalysts, R. Westrik—2094
Macroscopic spirals and the dislocation theory of crystal growth, N. Cabrera—1111(L)
Madelung constants and coordination, David H. Templeton—2097(L)
Molecular structure of B_4Cl_4, Masao Atoji and William N. Lipscomb—172(L)
Molecular structure of B_5H_{11}, Louis R. Lavine and William N. Lipscomb—2087(L)
Nature of the gradual transition in sodium borohydride, W. H. Stockmayer and C. C. Stephenson—1311(L)
Neutron diffraction study of tetragonal potassium dihydrogen phosphate, S. W. Peterson, Henri A. Levy, and S. H. Simonsen—2084(L)
Neutron diffraction study of the NaCl-type modification of ND_4Br and ND_4I, Henri A. Levy and S. W. Peterson—366(L)
New structure type for metallic oxides of formula A_6BO_8, John S. Kasper and C. L. Christ—1897(L)
Strong hydrogen bonds in crystals, R. C. Lord and R. E. Merrifield—166(L)
Structure and residual entropy of ice, R. E. Rundle—1311(L)
Structure of B_4Cl_4, George H. Duffey—761(L)
Structures of the interhalogen compounds. I. Chlorine trifluoride at −120°C, Robinson D. Burbank and Frank N. Bensey—602
Study of the structure of quartz, cristobelite, and vitreous silica by reflection in infrared, I. Simon and H. O. McMahon—23
T^3 dependence of the low temperature specific heat of boron nitride, A. S. Dworkin, D. J. Sasmor, and R. R. VanArtsdalen—954(L)

Crystalline State

Absorption bands and lines in irradiated LiF, Charles J. Delbecq and Peter Pringsheim—794
Acoustic wave velocities, elastic constants, and Debye characteristics temperature for polycrystalline $MgCd^1$, Charles S. Smith and W. E. Wallace—1120(L)
Analysis of the spectrum of the Nd^{+++} ion in the bromate crystal, Robert A. Satten—637
Antiferromagnetic structure in Cr_2O_3, B. N. Brockhouse—961(L)
Approximate formulas for many-center integrals in the theory of molecules and crystals, Per-Olov Löwdin—374(L)
Atomic mercury as a luminescent activator, J. S. Penner, R. E. Hanson, and F. E. Williams—759(L)
Band structure of graphite, J. L. Carter and J. A. Krumhansl—2238(L)
$BaTiO_3$−KF phase diagram, Clarence Karan and Bernard J. Skinner—2225(L)
Chemical effects due to the ionization of impurities in semiconductors, Howard Reiss—1209
Chlorine quadrupole resonances in solids, P. J. Bray and P. J. Ring—2226(L)
Correlation between photoconductance and ultraviolet spectrum of anthracene crystals, D. J. Carswell—1890(L)
$C_p - C_v$ in silicon and germanium, M. E. Fine—1427(L)
Crystal momentum as a quantum mechanical operator, E. N. Adams, II—2013
Crystal structure and lattice energy of orthorhombic hexachloroethane, Yoshio Sasada and Masao Atoji—145
Crystal structure of diethylsilanediol, and its hydroxyl groups, Masao Kakudo and Takeo Watase—167(L)
Decomposition of nitrate crystals by ionizing radiations, Gerhart Hennig, Robert Lees, and Max S. Matheson—664
Deuterium effect on hydrogen bond distances in crystals, R. E. Rundle—937(L)
Dielectric losses of sodium chloride crystals, Y. Haven—171(L)
Dielectric properties of hydrogen halides. I. Hydrogen bromide, Norman L. Brown and Robert H. Cole—1920
Diffuse spots of pyrene at higher temperatures, M. N. Dutt—380(L)
Diffusion in porous catalysts, C. Bokhoven and J. Hoogschagen—159(L)
Disorder in crystalline 2,2-dinitropropane at room temperature, S. C. Abrahams—1218
Distribution of solute in crystals grown from the melt. Part I. Theoretical, J. A. Burton, R. C. Prim, and W. P. Slichter—1987
Distribution of solute in crystals grown from the melt. Part II. Experimental, J. A. Burton, E. D. Kolb, W. P. Slichter, and J. D. Struthers—1991
Dynamics of the graphite lattice, Herbert B. Rosenstock—2064
Effects of neutron bombardment on a zinc sulfide phosphor, Alan W. Smith and John Turkevich—367(L)
Electrical conductivity of chromia-alumina dehydrogenation catalyst, P. B. Weisz, C. D. Prater, and K. D. Rittenhouse—2236(L)

Crystalline State (continued)
Electrical conductivity of hydrocarbon cracking catalyst, P. B. Weisz, C. D. Prater, and K. D. Rittenhouse—2236(L)
Electrical conductivity of some alkaline earth titanates, E. K. Weise and I. A. Lesk—801
Electric resistivity of interstitial compounds of graphite, S. Mrozowski—492
Electronic conduction in silicon carbide, J. T. Kendall—821
Entropy and low temperature heat capacity of neptunium dioxide, Edgar F. Westrum, Jr., J. B. Hatcher, and Darrell W. Osborne—419
Evidence for one-dimensional rotation in ammonium iodide, R. C. Plumb and D. F. Hornig—366(L)
Evidence for one-dimensional rotation in NH_4I, R. C. Plumb and D. F. Hornig—1113(L)
Exchange frequency electron spin resonance in ferrites, J. Kaplan and C. Kittel—760(L)
Extra laue reflections of tetraphenylethylene crystal, M. N. Dutt—1609(L)
F-bands in some mixed crystals of the alkali halides, Robert J. Gnaedinger, Jr.—323
Heat capacity of chain polymeric crystals, W. H. Stockmayer and C. E. Hecht—1954
Heat capacity and thermal diffusivity of silver bromide, T. E. Pochapsky—1539
Heat capacity of thorium dioxide from 10 to 305°K. The heat capacity anomalies in uranium dioxide and neptunium dioxide, Darrel W. Osborne and Edgar F. Westrum, Jr.—1884
High temperature susceptibility of permanent dipole lattices, Robert Rosenberg and Melvin Lax—424
Hindered molecular rotation in liquid crystals, R. D. Spence, H. S. Gutowsky, and C. H. Holm—1891(L)
Hot atom recoils from $C^{12}(\gamma, n)C^{11}$, Frank S. Rowland and W. F. Libby—1493
Influence of the packing on the atomformfactor based on the Thomas-Fermi theory, Kwai Umeda and Yasuo Tomishima—2085(L)
Infrared absorption of solid N_2O_5, Roy Teranishi and J. C. Decius—1116(L)
Infrared spectra of tetranitromethane, P. H. Lindenmeyer and P. M. Harris—408
Infrared spectra of three solid phases of methyl ammonium chloride, R. D. Waldron—734
Infrared spectrum of the H_3O^+ ion in acid hydrates, D. E. Bethell and N. Sheppard—1421(L)
Intensification in zinc selenide phosphors, Simon Larach—756(L)
Interaction of methylene deformation frequencies in paraffin crystals, R. S. Stein and G. B. B. M. Sutherland—370(L)
Interactions of randomly disordered molecules, Masao Atoji and William N. Lipscomb—1480
Interatomic electric quadrupole-quadrupole coupling in salts of cerium, R. Finkelstein and A. Mencher—472
Investigation of crystal growth by thermal etching and oriented overgrowth, Alexander Smakula and Myron W. Klein—100
Investigation of the thermoluminescence of fluorite colored by x-ray irradiation, John J. Hill and Jack Aron—223
Isotope effect and thermal expansion coefficients of crystals, Christer E. Nordman and William N. Lipscomb—2077(L)
Kinetics of the disorder-order transformation in Cu_3Au, Norman W. Lord—692
Lattice dynamics of body-centered and face-centered cubic metallic elements, Jules de Launay—1975
Lattice parameters and Curie points of unreduced iron catalysts, R. Westrik—2094(L)
Lattice vibration specific heat of graphite, J. Krumhansl and and H. Brooks—1663
Macroscopic spirals and the dislocation theory of crystal growth, N. Cabrera—1111(L)
Madelung constants and coordination, David H. Templeton—2097(L)
Magnetic properties of some anhydrous chlorides, Norman Elliott—890
Molecular species evaporating from a carbon surface, William A. Chupka and Mark G. Inghram—1313(L)
Molecular structure of B_4Cl_4, Masao Atoji and William N. Lipscomb—172(L)
Nature of the gradual transition in sodium borohydride, W. H. Stockmayer and C. C. Stephenson—1311(L)
Neutron diffraction study of the NaCl-type modification of ND_4Br and ND_4I, Henri Levy and S. W. Peterson—366(L)
Neutron diffraction study of tetragonal potassium dihydrogen phosphate, S. W. Peterson, Henri A. Levy, and S. H. Simonsen—2084(L)
Note on frequency spectra of simple solids from specific heat data, Jenn Lin Hwang—168(L)
Note on some regularities of the absorption band maxima of colored alkali metal halides, A. Glasner and F. C. Tompkins—1817
Nuclear quadrupole resonance of bromine in molecular solids, S. Kojima, K. Tsukada, S. Ogawa, and A. Shimauchi—1415(L)
Nuclear quadrupole resonance of iodine in molecular solids, S. Kojima, K. Taukada, S. Ogawa, and A. Shimauchi—2237(L)
Optical properties of natural and synthetic hackmanite, David B. Medved—1309(L)
Paramagnetism in a thermochromic compound, Walter G. Nielsen and George K. Fraenkel—1619(L)
Perturbations on exciton states in molecular crystals, Harvey Winston—170(L)
Phase equilibrium in the system calcite-aragonite, John C. Jamieson—1385
Phase transformation of cobalt as observed on single crystals, Victor J. Kehrer and Henry Leidheiser, Jr.—570(L)
Polarization in liquid dielectrics, George Jaffé and Charlotte Z. LeMay—920
Polarized fluorescence of molecules of some single organic crystals, S. C. Ganguly and N. K. Choudhury—554
Precision measurements of enthalpy of KBr and KI at high temperatures, Charles B. Cooper—777
Presence of free chlorine in sodium chloride crystals containing color centers and color center precursors, Michael Hacskaylo, Dumas Otterson, and Philip Schwed—1434
Presence of free sodium in sodium chloride crystals containing color centers and color center precursors, Michael Hacskaylo and Dumas Otterson—552
Proton magnetic resonance experiment on a single crystal of oxalic acid dihydrate, $(COOH)_2 \cdot 2H_2O$, J. Itoh, R. Kusaka, R. Kiriyama, and S. Yabumoto—1895(L)
Proton magnetic resonance of the CH_3 group. I. Investigation of six tetrasubstituted methanes, J. G. Powles and H. S. Gutowsky—1695
Proton magnetic resonance of the CH_3 group. II. Solid solutions of *t*-butyl chloride in carbon tetrachloride, J. G. Powles and H. G. Gutowsky—1704
Pure quadrupole spectra: alkyl bromides and iodides, Henry Zeldes and Ralph Livingston—1418(L)
Pure quadrupole spectra of some nitrochlorobenzenes, T. L. Weatherly and Quitman Williams—2073(L)
Raman spectrum and cathode-luminescence spectrum of aluminum phosphate, B. D. Saksena and L. M. Pant—1414(L)
Rb^{87} and Cs^{133} magnetic resonance shifts in the solid halides, H. S. Gutowsky and B. R. McGarvey—1423(L)

Relation between dynamic viscosity and rigidity, Ali A. K. Ibrahim—1422(L)
Rotational isomerism in chloroacetone, San-Ichiro Mizushima, Takehiko Shimanouchi, Tatsuo Miyazawa, Isao Ichishima, Kenji Kuratani, Ichiro Nakagawa, and Nobuhiko Shido—815
Self-diffusion in the alkali metals, D. K. C. MacDonald —177(L)
Some optical properties of potassium iodide-thallium phosphors, Philip H. Yuster and Charles J. Delbecq—892
Some properties of sodium and potassium near their melting points, L. G. Carpenter—2244(L)
Some thermal reactions of the higher iron carbides, Ernst M. Cohn and L. J. E. Hoffer—354
Space-charge layer and distribution of lattice defects at the surface of ionic crystals, Kurt Lehovec—1123
Specific heat of crystalline selenium at low temperatures, Warren DeSorbo—1144
Specific heat of diamond at low temperatures, R. Berman and J. Poulter—1906(L)
Specific heat of diamond at low temperatures, Warren DeSorbo—876
Specific heat of graphite from 13° to 300°K, W. DeSorbo and W. W. Tyler—1660
Statistical theory of order-disorder equilibrium at high temperatures, Philip Schwed and Gerhart Groetzinger —963
Strong hydrogen bonds in crystals, R. C. Lord and R. E. Merrifield—166(L)
Structure and residual entropy of ice, R. E. Rundle—1311(L)
Structure of B_4Cl_4, George H. Duffey—761(L)
Study in the mechanics of crystal growth from a supersaturated solution, G. C. Krueger and C. W. Miller—2018
Study of the structure of quartz, cristobalite, and vitreous silica by reflection in infrared, I. Simon and H. O. McMahon—23
Surface migration of water molecules in ice, E. J. Murphy —1831
Surface photoconductivity in cadmium sulfide crystals, Richard H. Bube—1409(L)
Symmetry assignments for the first two excited singlet electronic states of the naphthalene molecule, Otto Schnepp and Donald S. McClure—959(L)
T^2 dependence of the low-temperature specific heat of boron nitride, A. S. Dworkin, D. J. Sasmor, and E. R. VanArtsdalen—954(L)
Theory of cooperative phenomena. III. Detailed discussions of the cluster variation method, Michio Kurata, Ryoichi Kikuchi, and Tatsuro Watari—434
Theory of sensitized luminescence in solids, D. L. Dexter —839
Theory of successive rotational transitions in crystals, Theodore J. Krieger and Hubert M. James—176(L)
Thermal and dielectric properties of crystalline long-chain acetates, R. J. Meakins and Joan W. Mulley—1934
Thermal equilibrium between *F* centers and *M* centers in alkali halides, William A. Smith and Allen B. Scott —2096(L)
Thermal expansion of zirconium between 298°K and 1600°K, Gordon B. Skinner and Herrick L. Johnston—1383
Thermoluminescence of ice, Eugene C. Avery and Leonard I. Grossweiner—372(L)
Transition temperatures in some dihydrogen and dideutero phosphates and arsenates and their solid solutions, C. C. Stephenson, J. M. Corbella, and L. A. Russell—1110(L)
Valence stabilization in crystals, Dieter M. Gruen—2083(L)
Vibration spectrum of a simple cubic lattice, Gordon F. Newell—1877
Vibrations of a simple cubic lattice. I, Herbert B. Rosenstock and Gordon F. Newell—1607(L)
Vibrations of a simple cubic lattice. II, Herbert B. Rosenstock and Hilda M. Rosenstock—1608(L)

Detonation
Detonation of pentaerythritol tetranitrate, M. P. Murgai —1403(L)
Possible explanation of the radioactivity induced by the detonation of shaped charges, L. Grunberg and K. H. R. Wright—763(L)
Deuterium (see **Isotopes**)
Dielectrics
Complex dielectric constants of some aliphatic alcohols at 9733 mc/sec, Naokazu Koizumi—1898(L)
Dielectric constant theory for polar liquids, William Fuller Brown, Jr.—1327
Dielectric constants of water-ethyl acetate mixtures, A. P. Altshuller—562(L)
Dielectric dispersion in the microwave region of six tetrasubstituted methanes in the solid state, J. G. Powles, D. E. Williams, and C. P. Smyth—136
Dielectric dispersion of water vapor adsorbed on silica gel, Kan-Ichi Kamiyoshi and Takeshi Odake—1295(L)
Dielectric losses of sodium chloride crystals, Y. Haven—171(L)
Dielectric polarization and self-ionization in carboxylic acids, Frank E. Harris and Berni J. Alder—1306(L)
Dielectric polarization in polar substances, Frank E. Harris and Berni J. Alder—1031
Dielectric polarization and structure of polar liquids under pressure, Frank E. Harris, Ernest W. Haycock, and Berni J. Alder—1943
Dielectric properties of hydrogen halides. I. Hydrogen bromide, Norman L. Brown and Robert H. Cole—1920
Dielectric relaxation and the internal field, J. G. Powles —633
Dielectric and ultrasonic relaxation in glycerol, Theodore A. Litovitz and Daniele Sette—17
Dipole loss in polystyrene and derivatives, Edward B. Baker, Robert P. Auty, and Grover J. Ritenour—159(L)
Dipole moments of gaseous thallous halides, Aubrey P. Altshuller—2074(L)
Electric polarizability of polar ions, Karol J. Mysels—201
Electronic structure and polarity of the water molecule, J. A. Pople—2234(L)
Green's "correction" of Yvon's dielectric constant formula, William Fuller Brown, Jr.—1121(L)
Intermolecular potentials from dielectric polarization in polar gases, Frank E. Harris and Berni J. Alder—1351
Millimeter wavelength dispersion of water vapor, George Burnbaum—57
Polarizability and configuration of *n*-paraffins, Richard S. Stein—1193
Polarizability of the hydride ion and the dipole moments and binding energies of the alkali metal hydrides, Aubrey P. Altshuller—2074(L)
Polarization in liquid dielectrics, George Jaffé and Charlotte Z. LeMay—920
Reaction field of a noncentral dipole, B. K. P. Scaife—945(L)
Reaction field of polar liquids, Th. G. Scholte—2087(L)
Thermal and dielectric properties of crystalline long-chain acetates, R. J. Meakins and Joan W. Mulley—1934
Diffusion
Anomalous diffusion of acetone into cellulose acetate, F. A. Long, E. Bagley, and J. Wilkens—1412(L)
Diffusion and thermal diffusion of isotopic gases, Eugene M. Holleran—2184
Diffusion in binary systems, Stephen Prager—1344

Diffusion (continued)
Diffusion of iodine in carbon tetrachloride under pressure, E. W. Haycock, B. J. Alder, and J. H. Hildebrand—1601
Diffusion in liquid sulfur, R. L. Saxton and H. G. Drickamer —1362
Diffusion in porous catalysts, C. Bokhoven and J. Hoogschagen—159(L)
Diffusion in the system CH_4-TCH_3 to 300 atmospheres pressure, Q. R. Jeffries and H. G. Drickamer—1358
Diffusion with a sharp moving boundary, Hiroshi Fujita —700
Distribution of solute in crystals grown from the melt. Part I. Theoretical, J. A. Burton, R. C. Prim, and W. P. Slichter—1987
Effect of pressure on diffusion in aqueous and alcoholic salt solutions, R. B. Cuddeback and H. G. Drickamer—597
Effect of pressure on diffusion in CS_2 organic mixtures, R. C. Koeller and H. G. Drickamer—575
Effect of pressure on diffusion in liquid sulfur, D. R. Cova and H. G. Drickamer—1364
Effect of pressure on diffusion in the system CCl_4-SnI_4, E. P. Doane and H. G. Drickamer—1359
Effect of pressure on diffusion in water and in sulfate solutions, R. B. Cuddeback, R. C. Koeller, and H. G. Drickamer—589
Effect of pressure on self-diffusion in carbon disulfide, R. C. Koeller and H. G. Drickamer—267
Electric dipole moments of several molecules from the stark effect, S. N. Ghosh, Ralph Trambarulo, and Walter Gordy—308
Equal pressure diffusion in porous substances, J. Hoogschagen—2096(L)
Field emission from nickel surfaces, Robert Gomer—293
Heat capacity and thermal diffusivity of silver bromide, T. E. Pochapsky—1539
Investigation of the surface reaction of oxygen with carbon on tungsten with the field emission microscope, Ralph Klein—1177
Investigations on silver sulfide, Carl Wagner—1819
Kinetics of the disorder-order transformation in Cu_3Au, Norman W. Lord—692
Self-diffusion in the alkali metals, D. K. C. MacDonald— 177(L)
Space-charge layer and distribution of lattice defects at the surface of ionic crystals, Kurt Lehovec—1123
Surface migration of water molecules in ice, R. J. Murphy —1831
Variational principles for irreversible processes, Philip Rosen —1220

Dipole Moment
Application of Fermi-Thomas model in computing dipole moment of iodine chloride, Herbert Glazer and Howard Reiss—903
Dipole moments of gaseous thallous halides, Aubrey P. Altshuller—2074(L)
Electric dipole moments of several molecules from the stark effect, S. N. Ghosh, Ralph Trambarulo, and Walter Gordy—308
Electronic structure and polarity of the water molecule, J. A. Pople—2234(L)
Isotope effect on the dipole moments of diatomic molecules, Aubrey P. Altshuller—2241(L)
Microwave spectrum and dipole moment of ethylenimine, Russell D. Johnson, Rollie J. Myers, and William D. Gwinn—1425
Polarizability of the hydride ion and the dipole moments and binding energies of the alkali metal hydrides, Aubrey P. Altshuller—2074(L)

Elasticity
Dynamics of the graphite lattice, Herbert B. Rosenstock —2064
Lattice dynamics of body-centered and face-centered cubic metallic elements, Jules de Launay—1975
Molecular theory of stress relaxation in polymeric media, K. W. Scott and R. S. Stein—1281
Relation between dynamic viscosity and rigidity, Ali A. K. Ibrahim—1422(L)
Theory of the linear viscoelastic properties of dilute solutions of coiling polymers, Prince E. Rouse, Jr.—1272

Electrochemistry
Calculation of the concentration of atomic hydrogen at a cathode, J. O'M. Bockris and Roger Parsons—569(L)
Correct application of the Gibbs-Helmholtz equation to reversible galvanic cells in which the compositions of some of the phases vary with temperature, R. E. Barieau —1827
Diffuse double layer theory for electrolytes of unsymmetrical valence types, David C. Grahame—1054
Investigations on silver sulfide, Carl Wagner—1819
Limiting thickness of an electrolyzed gas film capable of sustaining a given negative pressure, Lyman J. Briggs —779
Measurement of electrode polarization by current-interrupter method, Sidney Barnartt—2090(L)
Solution of the Debye-Hückel equations for a polarized electrode, B. Breyer and F. Gutmann—1323
Studies on the photovoltaic effect. III, Irvin Levin, Joseph R. Wiebush, Martin B. Bush, and Charles E. White —1654
Thermodynamics of reversible galvanic cells in which the compositions of some of the phases vary with temperature, J. W. Stout—1829

Electron Diffraction
Classical limit of mean thermal vibration amplitudes, J. C. Decius—1121(L)
Electron-diffraction and microwave investigation of tertiary butyl fluoride, Flemming Andersen, John Rastrup Andersen, Børge Bak, Otto Bastiansen, Eilif Risberg, and Lise Smedvik—373(L)
Mean amplitudes of thermal vibrations in polyatomic molecules. II. An approximate method for calculating mean square amplitudes, Yonezo Morino, Kôzo Kuchitsu, Akira Takashi, and Keiji Maeda—1927
Molecular structure of carbon tetrafluoride, C. W. W. Hoffman and R. L. Livingston—565(L)

Electron Microscopy
Field emission from nickel surfaces, Robert Gomer—293
Molecular images with the projection microscope. The ionization potential of zinc phthalocyanine, Robert Gomer and Donald Speer—73
Note on field emission, Robert Gomer—764(L)
Work function in field emission. Chemisorption, Robert Gomer—1869

Emission Spectra
Effect of 1470A irradiation of nitrogen-hydrogen mixtures and of ammonia, M. H. J. Wijnen and H. Austin Taylor —233
Investigation of the thermoluminescence of fluorite colored by x-ray irradiation, John J. Hill and Jack Aron—223
Effect of spectral line shape on apparent rotational temperatures of OH, S. S. Penner—686
Effects of self-absorption on rotational "temperatures" on OH in flames, Herbert P. Broida—1165
Effects of vibrational state on rotational intensity distributions in OH, A. M. Bass and H. P. Broida—173(L)
Emission bands of NO molecule in vacuum ultraviolet region, Yoshio Tanaka—788
Emission spectrum of OH from 1.4 to 1.7μ, W. S. Benedict, Earle K. Plyler, and C. J. Humphreys—398
Emission spectrum of undecomposed *N* methylpyrrole, Guilio Milazzo—163(L)

Intensities of vibration-rotation bands, Robert C. Herman and Kurt E. Shuler—373(L)
$n-\pi$ emission spectra, C. Reid—1906(L)
On the Miescher-Baer emission bands in the far ultraviolet region, Yoshia Tanaka—562(L)
Pre-ignition and flame spectra in the self-combustion of acetylene, Wm. W. Robertson, N. B. Humphrey, and Robbin C. Anderson—2093(L)
Rotational "temperatures" of OH in diluted flames, W. R. Kane and H. P. Broida—347
Rotational and vibrational "temperatures" of CH in flames at atmospheric pressure, Herbert P. Broida—340
Spectrum of an argon-nitrogen mixture excited in a high voltage arc, R. W. Nicholls—568(L)
Thermoluminescence of ice, Eugene C. Avery and Leonard I. Grossweiner—372(L)

Energy Transfer
Collisional excitation of F_2O, Henry Aroeste—870
Energy exchange in molecular collisions, Benjamin Widon and S. H. Bauer—1670
Exchange between rotational and translational energy in gas molecules, John C. Berkele—2034
Quantum mechanics of collisions between diatomic molecules, C. F. Curtiss—2045

Equation of State
Equation of state calculations by fast computing machines, Nicholas Metropolis, Arianna W. Rosenbluth, Marshall N. Rosenbluth, Augusta H. Teller, and Edward Teller —1087
General relation between the density virial coefficients and the pressure virial coefficients, William E. Putnam and John E. Kilpatrick—951(L)
Intermolecular force constants of fluorine, David White, Jih-Heng Hu, and Herrick L. Johnston—1149
Negative cluster concentrations, John E. Kilpatrick—1366
Pressure virial coefficients in terms of cluster integrals, William E. Putnam and John E. Kilpatrick—1112(L)
Quantum-mechanical treatment of virial coefficient, John E. Kilpatrick—274
Radial distribution functions and the equation of state of monatomic fluids, Robert W. Zwanzig, John G. Kirkwood, Kenneth F. Stripp, and Irwin Oppenheim—1268
Random walk theory of one-dimensional gases, C. W. Harris, Robert L. Sells, and Eugene Guth—1617(L)
Representation of gas properties in terms of molecular clusters, Harold W. Woolley—236
Some remarks on the equation of state and the energy of quantum-liquids at the critical point, Johan van Dranen —2095(L)
Theory of the virial development of the equation of state of monoatomic gases, R. J. Riddell, Jr., and G. E. Uhlenbeck —2056
Van der Waals' a and ionization potential of inert gases, Yatendra Pal Varshni—1119(L)

Errata
Errata: Adsorption on proteins and interactions between protein molecules in solution, Terrell L. Hill—2242(L)
Erratum: Constants in the equation of state of a gas, Leo F. Epstein—762(L)
Erratum: Diffusional processes in the growth of aerosol particles, F. C. Collins and H. L. Frisch—1116(L)
Erratum: Emission spectrum of undecomposed N methylpyrrole, Guilio Milazzo—1312(L)
Errata: Hydrodynamic method for the measurement of rates of very fast reactions, S. H. Bauer—956(L)
Erratum: Infrared spectra of NF_3 and PF_3, M. Kent Wilson and Santiago R. Polo—1426(L)
Erratum: LCAO self-consistent fields calculation of the ground state of CO_2, Joseph F. Mulligan—761(L)
Erratum: Luminescence and trapping in phosphors containing gallium, Richard H. Bube and Simon Larach—761(L)
Erratum: Note on rotational line strengths in slightly asymmetric rotors, David R. Lide, Jr.—572(L)
Erratum: Nuclear magnetic resonance experiment on a four-proton system in a single crystal of $K_2HgCl_4H_2O$, J. Itoh, R. Kusaka, Y. Yamagata, R. Kiriyama, and H. Ibamoto—190(L)
Errata: Paramagnetism in a thermochromic compound, Walter G. Nilsen and George K. Fraenkel—2232(L)
Erratum: Possible explanation of radioactivity induced by the detonation of shaped charges, L. Grunberg and K. H. R. Wright—1426(L)
Erratum: Preliminary analysis of the pure-rotational spectrum of methylamine, David R. Lide, Jr.—571(L)
Erratum: Self-diffusion in the alkali metals, D. K. C. MacDonald—2097(L)
Erratum: Stability of metallo-organic compounds, H. H. Jaffé and G. O. Doak—1118(L)
Errata: Statistical mechanical theory of irreversible condensation. I, Howard Reiss—1312(L)
Erratum: T^2 dependence of the low temperature specific heat of gallium, Warren DeSorbo—1426(L)
Erratum: Theory of absorption spectra of carotenoids, Gentaro Araki—381(L)
Erratum: Use of radioactive alpha-recoil in the study of soluble ionized surface layers, Gunnar Aniansson and Naftali H. Steiger—2239(L)
Erratum: Vibrational spectra of crystals, Wayne A. Bowers and Herbert B. Rosenstock—1607(L)

Flames
Adiabatic correlation rules for reactions involving polyatomic intermediate complexes and their application to the formation of $OH(^2\Sigma^+)$ in the H_2-O_2 flame, Kurt E. Shuler—624
Burning velocity of ethylene oxide decomposition flames, Raymond Friedman and Edward Burke—165(L)
Burning velocity measurement, Dorothy M. Simon and Edgar L. Wong—936(L)
Detection of atoms and free radicals in flames by mass spectrometric techniques, S. N. Foner and R. L. Hudson —1374
Effect of spectral line shape on apparent rotational temperatures of OH, S. S. Penner—686
Effects of self-absorption on rotational "temperatures" on OH in flames, Herbert P. Broida—1165
Effects of vibrational state on rotational intensity distributions in OH, A. M. Bass and H. P. Broida—173(L)
Formation and excitation of atomic sodium in hydrogen diffusion flames, Loré Lindner, W. E. Scott, and E. R. Stephens—161(L)
Hydrodynamic stability of flame fronts, Harvey Einbinder —480
Hydrogen-fluorine flame temperatures, David Altman and Milton Farber—1118(L)
Mechanism of acetone vapor fluorescence, Harold J. Groh, Jr., G. W. Luckey, and W. Albert Noyes, Jr.—115
Note on the infrared absorption of the flame of a simple double-base powder, Horace F. White, George R. Cowan, David Rotenberg, and Bryce Crawford, Jr. —1309(L)
Pre-ignition and flame spectra in the self-combustion of acetylene, Wm. W. Robertson, N. B. Humphrey, and Robbin C. Anderson—2093(L)
Rotational "temperatures" of OH in diluted flames, W. R. Kane and H. P. Broida—347
Rotational and vibrational "temperatures" of CH in flames at atmospheric pressure, Herbert P. Broida—340
Slot burner method for studying combustion wave instability, G. H. Markstein and L. M. Somers—941(L)
Theoretical model of a gaseous combustion wave governed by a first-order reaction, Raymond Friedman and Edward Burke—710

Fluorescence
Determination of the fluorescence lifetimes of dissolved substances by a phase shift method, E. A. Bailey, Jr., and G. K. Rollefson—1315
Fluorescence of biacetyl vapor, Harold J. Groh, Jr.—674
Mechanism of acetone vapor fluorescence, Harold J. Groh, Jr., G. W. Luckey, and W. Albert Noyes, Jr.—115
Multiple reversible color changes initiated by irradiation at low temperature, Yehuda Hirshberg and Ernst Fischer —1619(L)
Polarized fluorescence of molecules of some single organic crystals, S. C. Ganguly and N. K. Choudhury—554
Raman spectrum and cathode-luminescence spectrum of aluminum phosphate, B. D. Saksena and L. M. Pant—1414(L)
Triplet states in solution, George Porter and Maurice W. Windsor—2088(L)
Free Rotation (see **Rotation**)

Glasses
Streaming potentials across glass capillaries for sinusoidal pressure, Robert Gay Packard—303

Heat Capacity (see **Thermodynamic Properties**)
High Pressures
Dielectric polarization and structure of polar liquids under pressure, Frank E. Harris, Ernest W. Haycock, and Berni J. Alder—1943
Diffusion of iodine in carbon tetrachloride under pressure, E. W. Haycock, B. J. Alder, and J. H. Hildebrand—1601
Diffusion in the system CH_4-TCH_3 to 300 atmospheres pressure, Q. R. Jeffries and H. G. Drickamer—1358
Effect of pressure on diffusion in aqueous and alcoholic salt solutions, R. B. Cuddeback and H. G. Drickamer—597
Effect of pressure on diffusion in CS_2 organic mixtures, R. C. Koeller and H. G. Drickamer—575
Effect of pressure on diffusion in liquid sulfur, D. R. Cova and H. G. Drickamer—1364
Effect of pressure on diffusion in the system CCl_4-SnI_4, E. P. Doane and H. G. Drickamer—1359
Effect of pressure on diffusion in water and in sulfate solutions, R. B. Cuddeback, R. C. Koeller, and H. G. Drickamer—589
Effect of pressure on self-diffusion in carbon disulfide, R. C. Koeller and H. G. Drickamer—267
Hindered Rotation (see **Rotation**)

Infra-Red Spectra (see **Absorption Spectra**)
Intensities of Spectra
Absorption coefficients of gases in the vacuum ultraviolet. Part II. Nitrous oxide, Murray Zelikoff, K. Watanabe, and Edward C. Y. Inn—1643
Absorption coefficients of gases in the vacuum ultraviolet. Part III. CO_2, Edward C. Y. Inn, K. Watanabe, and Murray Zelikoff—1648
Absorption coefficients of gases in the vacuum ultraviolet. Part IV. Ozone, Yoshio Tanaka, Edward C. Y. Inn, and K. Watanabe—1651
Absorption coefficients of oxygen in the vacuum ultraviolet, K. Watanabe, Edward C. Y. Inn, and Murray Zelikoff—1026
Bond moments and derivatives in CF_4, SiF_4, and SF_6 from infrared intensities, P. N. Schatz and D. F. Hornig—1516
Conjugation and the intensity of the infrared carbonyl band, Gordon M. Barrow—2008
Effects of vibrational state on rotational intensity distributions in OH, A. M. Bass and H. P. Broida—173(L)
Infrared intensity measurements on nitric oxide, hydrogen chloride, and hydrogen bromide, S. S. Penner and D. Weber—649

Ionization Potentials
Electron impact studies of the vinyl ion and radical, F. H. Field—1506
Energies of strained carbonium ions, J. L. Franklin and F. H. Field—550
Existence of multiply charged molecular ions of HBr, HCl, and DCl, W. H. Johnston and J. R. Arnold—1499
Ionization and dissociation of methyl siloxanes by electron impact, Vernon H. Dibeler, Fred L. Mohler, and R. M. Reese—180(L)
Studies of ionization efficiency. Part III. The detection and interpretation of fine structure, J. D. Morrison—1767
Isotopes
Chlorine photosensitized isotope exchange between molecular oxygen species, Richard A. Ogg, Jr.—2078(L)
Diffusion and thermal diffusion of isotopic gases, Eugene M. Holleran—2184
Equilibrium in the exchange of deuterium between ammonia and hydrogen, Morris Perlman, Jacob Bigeleisen, and Norman Elliott—70
Homomolecular exchange of oxygen, W. H. Johnston and C. J. O'Shea—2080(L)
Intramolecular carbon isotope effects in the decarboxylation of malonic acid and bromomalonic acid, Peter E. Yankwich and Edward C. Stivers—61
Kinetic evidence for the gas-phase existence of the peroxy radicals NO_4 and NO_3, Richard A. Ogg, Jr.—2079(L)
Kinetics of two exchange reactions involving diborane, P. Calvin Maybury and W. S. Koski—742
Mechanism of acetone pyrolysis, J. R. McNesby, T. W. Davis, and A. S. Gordon—956(L)
Molecular kinetics of hydrogenation and exchange reactions of ethylene at surfaces, Keith J. Laidler, Mary Colman Wall, and Maria Clare Markham—949(L)
Ozone catalysis of isotope exchange between molecular oxygen species, Richard A. Ogg, Jr., and William T. Sutphen—2078(L)
Photochemical enrichment of mercury 202, Murray Zelikoff, Leonard M. Aschenbrand, and Peter H. Wyckoff—376(L)
Preliminary experiments using Mg^{28} as a tracer with chlorophylls, plants, and their extracts, R. S. Becker and R. K. Sheline—946(L)
Some observations on the chemical behavior of iodine at low concentrations, Milton Kahn and Arthur C. Wahl—1185
Study of the formation of iron percarbide, John J. Mitchell —1153
Thermal diffusion in isotopic mixtures in the critical region, F. E. Caskey and H. G. Drickamer—153
Isotope Effects
Assignment of the O—H deformation frequency, James R. Quinan and Stephen E. Wiberley—1896(L)
Carbon-14 isotope effect in the exchange reaction between carbon monoxide and phosgene, D. R. Stranks—2232(L)
Deuterium effect on hydrogen bond distances in crystals, R. N. Rundle—937(L)
Effect of isotopic substitution on the entropy, enthalpy, and heat capacity of ideal gases. I. Systems in thermal equilibrium, Jacob Bigeleisen—1333
Formulation of isotopic splitting in terms of the reciprocal kinetic energy matrix, William J. Taylor—763(L)
Fractionation of the carbon isotopes in decarboxylation reactions. VI. Comparison of the intermolecular isotope effects of a pair of isotopic isomers, Jacob Bigeleisen and Max Wolfsberg—2120
Hot atom chemistry of the alkyl bromides; absence of effects due to high radiation density; isotope separation in solids, Frank S. Rowland and W. F. Libby—1495
Intramolecular carbon isotope effects in the decarboxylation of malonic acid and bromomalonic acid, Peter E. Yankwich and Edward C. Stivers—61

Intramolecular isotope effects in the reactions of benzoic-α-C^{14} anhydride, Vernon F. Raaen and Gus A. Ropp—1902(L)
Isotope effect on the dipole moments of diatomic molecules, Aubrey P. Altshuller—2241(L)
Isotope effect and thermal expansion coefficients of crystals, Christer E. Nordman and William N. Lipscomb—2077(L)
Microwave spectrum of HDO, D. W. Posener and M. W. P. Strandberg—1401(L)
Microwave spectrum of phosgene, G. Wilse Robinson—1741
Modified isotopic exchange rate expression, Rowland E. Johnson—1405(L)
Photochemical enrichment of mercury 202, Murray Zelikoff, Leonard M. Aschenbrand, and Peter H. Wyckoff—376(L)
Photochemical separation of isotopes, Bruce H. Billings, W. J. Hitchcock, and Murray Zelikoff—1762
PH_2D and PHD_2 rotational lines in the region between 50 and 100 K, Richard E. Stroup and Robert A. Oetjen—2092(L)
Polarized infrared spectrum of $KAu(CN)_2$, Llewellyn H. Jones—1891(L)
Rate of association of methyl radicals, G. B. Kistiakowsky and E. Kirk Roberts—1637
Reactions of methyl radicals with the hydrogen isotopes, E. Whittle and E. W. R. Steacie—993
Rotation-vibration spectra of diatomic and simple polyatomic molecules with long absorbing paths. X. Spectrum of tri-deuteromethane in the photographic infrared, L. F. H. Bovey—830
Substituted methanes. XIX. C^{13} isotopic shifts in the vibrational spectrum of methanol, Richard B. Bernstein, James E. Lamport, and Forrest F. Cleveland—1903(L)
Sum rule for the vibrational frequencies of homologs, H. J. Bernstein and A. D. E. Pullin—2188
Structure of HNCS from microwave spectra, G. C. Dousmanis, T. M. Sanders, Jr., C. H. Townes, and H. J. Zeiger—1416(L)
Temperature independent factor in the relative rates of isotopic three-center reactions, Jacob Bigeleisen and Max Wolfsberg—1972
Transition temperatures in some dihydrogen and dideutero phosphates and arsonates and their solid solutions, C. C. Stephenson, J. M. Corbella, and L. A. Russell—1110(L)
Two new lines in the microwave spectrum of heavy water, Harry D. Crawford—2099(L)
Ultrasonic velocity, density, and compressibility of supercooled H_2O and D_2O, R. T. Lagemann, L. W. Gilley, and E. G. McLeroy—819
Vapor pressures of the deuteromethanes, George T. Armstrong, F. G. Brickwedde, and R. B. Scott—1297(L)
Vibration-rotation spectrum of D_2O, W. S. Benedict, Norman Gallar, and Earle K. Plyler—1301(L)
Vibration-rotation spectrum of HDO, W. S. Benedict, Norman Gallar, and Earle K. Plyler—1302(L)
Vibrational spectra of pyridine and pyridine-d_5, Lester Corrsin, B. J. Fax, and R. C. Lord—1170

Kinetics of Reaction

Adiabatic correlation rules for reactions involving polyatomic intermediate complexes and their application to the formation of $OH(^2\Sigma^+)$ in the H_2-O_2 flame, Kurt E. Shuler—624
Application of a fast-scanning infrared spectrometer to a kinetic study of the $NO_2-C_2H_5OH$ reaction, Richard E. Nightingale, George R. Cowan, and Bryce Crawford, Jr.—1398(L)
Bromination of hydrocarbons. VI. Photochemical and thermal bromination of toluene. Bond dissociation energies, Herbert T. Anderson, Jr., Harold A. Scheraga, and Ervin R. VanArtsdalen—1258
Burning velocity of ethylene oxide decomposition flames, Raymond Friedman and Edward Burke—165(L)
Calculation of the concentration of atomic hydrogen at a cathode, J. O'M. Bockris and Roger Parsons—569(L)
Carbon-14 isotope effect in the exchange reaction between carbon monoxide and phosgene, D. R. Stranks—2232(L)
"Chemical knife"; preservation of ozone for thirty-six days, H. O. Albrecht—1421(L)
Chlorine photosensitized isotope exchange between molecular oxygen species, Richard A. Ogg, Jr.—2078(L)
Collisional excitation of F_2O, Henry Aroeste—870
Comments on the kinetics of thermal decomposition of nitric oxide, Henry Wise and Maurice F. Frech—752(L)
Comments on the thermal decomposition of ozone, P. Harteck and S. Dondes—2241(L)
Decomposition of methanol-C^{14} under the influence of its own radiation, W. J. Skraba, J. C. Burr, Jr., and D. N. Hess—1296
Decomposition of ozone on the surface of glass wool, P. Harteck and S. Dondes—2240(L)
Detailed formulation of kinetic processes. II. The role of collision processes, Sidney W. Benson and Arthur E. Axworthy, Jr.—428
Detection of atoms and free radicals in flames by mass spectrometric techniques, S. N. Foner and R. L. Hudson—1374
Detection of the HO_2 radical by mass spectrometry, S. N. Foner and R. L. Hudson—1608(L)
Effect of isotopic substitution on the entropy, enthalpy, and heat capacity of ideal gases. I. Systems in thermal equilibrium, Jacob Bigeleisen—1333
Effects of electronic charge transfer between adsorbate and solid on chemisorption and catalysis, P. B. Weisz—1531
Entropy changes in free radical reactions, A. F. Trotman-Dickenson—211
Flow of oxide layer during oxidation of copper, Walter J. Moore—1117(L)
Formation and excitation of atomic sodium in hydrogen diffusion flames, Loré Lindner, W. E. Scott, and E. R. Stephens—161(L)
Fractionation of the carbon isotopes in decarboxylation reactions. VI. Comparison of the intermolecular isotope effects of a pair of isotopic isomers, Jacob Bigeleisen and Max Wolfsberg—2120
Free radicals by mass spectrometry. IV. The rate of combination of methyl radicals, K. U. Ingold and F. P. Lossing—1135
Homogeneous gas processes and time dependent perturbation theory, Henry Aroeste—1897(L)
Homomolecular exchange of oxygen, W. H. Johnston and C. J. O'Shea—2080(L)
Hydrogen peroxide formation by cobalt gamma-radiation, Thomas J. Sworski—375(L)
Intramolecular isotope effects in the reactions of benzoic-α-C^{14} anhydride, Vernon F. Raaen and Gus A. Ropp—1902(L)
Investigation of pyrolyses of benzyl benzoate, acetate and formate, M. Szwarc and J. Watson Taylor—1746
Investigation of the surface reaction of oxygen with carbon on tungsten with the field emission microscope, Ralph Klein—1177
Iron catalyzed reaction between nitrosyl disulfonate and hydroxylamine monosulfonate ions, William J. Ramsey and Don M. Yost—957(L)
Kinetic evidence for the gas-phase existence of the peroxy radicals NO_4 and NO_3, Richard A. Ogg, Jr.—2079(L)
Kinetic studies with a fast-scanning mass spectroscope, Edouard G. Leger and Cyrias Ouellet—1310(L)
Kinetics of decomposition of nitric oxide, Frederick Kaufman and John R. Kelso—751(L)

Kinetics of Reaction (continued)
Kinetics of fixation of atmospheric nitrogen at elevated temperatures, Henry Wise and Dwight I. Baker—1904(L)
Kinetics of reaction between ammonia and oxygen in a quartz vessel, Henry Wise and Maurice F. Frech—948(L)
Kinetics of the gas phase reaction between acetylene and ozone, Richard D. Cadle and Conrad Schadt—163(L)
Kinetics of the fast reaction between nitrogen dioxide and fluorine, Richard L. Perrine and Harold S. Johnson—2202
Kinetics of the heterogeneous parahydrogen conversion, Y. L. Sandler—2243(L)
Kinetics of two exchange reactions involving diborane, P. Calvin Maybury and W. S. Koski—742
Linear film growth in tarnishing reactions, R. C. Williams and P. R. Wallace—1294(L)
Loose transition states involving internal rotation, N. W. Luft—754(L)
Mechanism of acetone pyrolysis, J. R. McNesby, T. W. Davis, and A. S. Gordon—956(L)
Mechanism of acetone vapor fluorescence, Harold J. Groh, Jr., G. W. Luckey, and W. Albert Noyes, Jr.—115
Mechanism of the Hg($^3P_1$) photosensitized decomposition of ethylene, A. G. Mitchell and D. J. Le Roy—2075(L)
Mechanism of unimolecular reactions, Louis S. Kassel—1093
Method for determining the quantum yields of reactions initiated by mercury-6($^1P_1$)-atoms, R. A. Uphaus and H. E. Gunning—2229(L)
Method for studying gaseous disproportionation reactions of the type $nA = mB + (n-m)C$, Alan W. Searcy—2244(L)
Moderation of hot methyl radicals in photolysis of methyl iodides, Frank P. Hudson, Russell R. Williams, Jr., and William H. Hamill—1894(L)
Modified isotopic exchange rate expression, Rowland E. Johnson—1405(L)
Molecular kinetics of hydrogenation and exchange reactions of ethylene at surfaces, Keith J. Laidler, Mary Colman Wall, and Maria Clare Markham—949(L)
Note on the kinetics of unitary processes, Stuart A. Rice—2227(L)
Note on the quantum-mechanical calculation of reaction rates, Sidney Golden—2071(L)
Note on the rate of recombination of free atoms, Giorgio Careri—749(L)
Ozone catalysis of isotope exchange between molecular oxygen species, Richard A. Ogg, Jr., and William T. Sutphen—2078(L)
Photochemical decomposition of azomethane, M. H. Jones and E. W. R. Steacie—1018
Photochemical decomposition of benzene, G. E. Gibson, Norman Blake, and Max Kalm—1000
Photochemical decomposition of nitric oxide by absorption in the (0,0) and (1,0)γ bands, Gordon E. Moore, Oliver R. Wulf, and Richard M. Badger—2091
Photochemical separation of isotopes, Bruce H. Billings, W. J. Hitchcock, and Murray Zelikoff—1762
Photochlorination of methyl chloroformate in the gas phase, J. H. Brandy and D. J. Le Roy—1049
Photoelectric observation of the rate of recombination of iodine atoms, Royal Marshall and Norman Davidson—659
Photolysis of acetaldehyde, R. E. Dodd—748(L)
Photolysis of acetaldehyde, G. O. Pritchard, H. O. Pritchard, and A. F. Trotman-Dickenson—748(L)
Photolysis of mercury dimethyl in the presence of hydrocarbons, Richard E. Rebbert and E. W. R. Steacie—1723
Photosensitized oxidation of paraffins, J. A. Gray—1300(L)
Preliminary experiments using Mg^{28} as a tracer with chlorophylls, plants, and their extracts, R. S. Becker and R. K. Sheline—946(L)
Production of iodine from solutions of potassium iodide irradiated with hard x-rays, Everett R. Johnson—1417(L)
Pyrogenetic formation of ketones, R. I. Reed—377(L)
Quantum-mechanical calculation of reaction rates: A reply to the preceding note, E. Bauer and Ta-You Wu—2072(L)
Quantum-mechanical calculation of the rates of some chemical reactions, E. Bauer and Ta-You Wu—726
Rate constant of the reaction between hydrogen peroxide and ferrous ions, William Taylor and Joseph Weiss—1419(L)
Rate of association of methyl radicals, G. B. Kistiakowsky and E. Kirk Roberts—1637
Rate of combination of methyl radicals, K. U. Ingold and F. P. Lossing—368(L)
Rate of combination of methyl radicals, K. U. Ingold, I. H. S. Henderson, and F. P. Lossing—2239(L)
Rate of recombination of iodine atoms in solution, Royal Marshall and Norman Davidson—2086(L)
Rates of approach to equilibrium, S. H. Bauer—1888
Rates of chemical reactions near equilibrium, Bruno J. Zwolinski and Rudolph J. Marcus—2235(L)
Reaction of cyclobutane with Hg6($^3P_1$) atoms, D. L. Kantro and H. E. Gunning—1797
Reaction of optically excited mercury vapor with oxygen, David H. Volman—2086(L)
Reactions of methyl radicals with the hydrogen isotopes, E. Whittle and E. W. R. Steacie—993
Relationships between kinetics and acoustic phenomena in equilibrium systems, Milton Manes—1791
Remarks on mechanism of the Hg($^3P_1$) photosensitized decomposition of ethylene, B. de B. Darwent—2076(L)
Reply to Careri's "Note on the rate of recombination of free atoms," O. K. Rice—750(L)
Some new data on the NO$-N_2O_5$ reaction, George R. Cowan, David Rotenberg, Arthur Downie, Bryce Crawford, Jr., and R. A. Ogg, Jr.—1397(L)
Some observations on the chemical behavior of iodine at low concentrations, Milton Kahn and Arthur C. Wahl—1185
Some theoretical considerations of ether decompositions, B. G. Gowenlock—941(L)
Some thermal reactions of the higher iron carbides, Ernst M. Cohn and L. J. E. Hoffer—354
Studies by infrared spectra on the initiation process in autoxidation of methyl linolenate, N. A. Khan—952(L)
Studies on the gamma-radiation-induced polymerization of acrylonitrile, Irving A. Berstein, Earle C. Farmer, Walter G. Rothschild, and Florence F. Spalding—1303(L)
Study in the mechanics of crystal growth from a supersaturated solution, G. C. Krueger and C. W. Miller—2018
Study of the formation of iron percarbide, John J. Mitchell—1153
Unimolecular decompositions of some alkyl bromides, J. H. S. Green, G. D. Harden, Allan Maccoll, and P. J. Thomas—178(L)
Use of ultrasonic absorption for the determination of very rapid reaction rates at equilibrium: Application to the liquid phase association of carboxylic acids, Eli Freedman—1784
Temperature independent factor in the relative rates of isotopic three-center reactions, Jacob Bigeleisen and Max Wolfsberg—1972
Theoretical considerations concerning Hammett's equation. IV. Calculation of σ values, H. H. Jaffé—415
Theoretical model of a gaseous combustion wave governed by a first-order reaction, Raymond Friedman and Edward Burke—710
Theory of radiation chemistry: II. Track effects in radiolysis of water, Aryeh H. Samuel and John L. Magee—1080
Theory of reaction rates, Peter T. Landsberg—2228(L)

Thermal decomposition of nitromethane, Louis J. Hillenbrand, Jr. and Mary L. Kilpatrick—525
Triplet states in solution, George Porter and Maurice W. Windsor—2088

Large Molecules (see **Polymers**)
Light Scattering
Angular distribution of the light scattered by random coils, H. Benoit and Martin Goldstein—947(L)
Excluded volume in polymer chains, B. H. Zimm, W. H. Stockmayer, and M. Fixman—1716
Light scattering investigation of the polymolybdates, Michael Kestigian, Paul Colodny, and Richard S. Stein —952(L)
Light scattering study of a mixture of CCl_4 and CS_2, Joseph Powers and Richard S. Stein—1611(L)
Polarizability and configuration of *n* paraffins, Richard S. Stein—1193
Rayleigh's ratio (absolute turbidity levels) for benzene, carbon tetrachloride and toluene, Robert F. Stamm and Peter A. Button—1304(L)
Rayleigh's ratio for benzene and the problem of absolute light scattering determinations, M. Halwer, G. C. Nutting, and B. A. Brice—1425(L)
Refractive index correction in light-scattering measurements, D. J. Meier—1892(L)
Scattering factors for certain polydisperse systems, Martin Goldstein—1255
Liquids
Absorption of 3.3-cm microwaves in chloroform and ethylene dichloride in the liquid state, S. C. Sirkar and D. K. Ghosh—1614(L)
Application of the cell method to *r*-mer liquids, I. Prigogine, N. Trappeniers, and V. Mathot—559(L)
Application of the cell method to the statistical thermodynamics of solutions. II. Experimental, V. Mathot and A. Desmyter—782
Application of the cell model to the statistical thermodynamics of solutions. Volume change of mixing in solutions of molecules slightly different in size, I. Prigogine and A. Bellemans—561(L)
Comparative retentions of the nuclear isomers of Br^{80} in the propyl bromides, P. C. Capron and E. Crèvecoeur—1843
Critical point and the disturbed rotation of molecules in the liquid state, Johan van Dranen—1404(L)
Critical temperature and boiling point of normal paraffins, Yatendra Pal Varshni—2235(L)
Dependence of intensity of sound at source on its absorption coefficient in liquids, S. Parthasarathy, S. S. Chari, and D. Srinivasan—185(L)
Dielectric and ultrasonic relaxation in glycerol, Theodore A. Litovitz and Daniele Sette—17
Dielectric constant theory for polar liquids, William Fuller Brown, Jr.—1327
Dielectric polarization in polar substances, Frank R. Harris and Berni J. Alder—1031
Dielectric polarization and self-ionization in carboxylic acids, Frank E. Harris and Berni J. Alder—1306(L)
Dileectric polarization and structure of polar liquids under pressure, Frank E. Harris, Ernest W. Haycock, and Berni J. Alder—1943
Diffusion of iodine in carbon tetrachloride under pressure, H. W. Haycock, B. J. Alder, and J. H. Hildebrand—1601
Diffusion in liquid sulfur, R. L. Saxton and H. G. Drickamer —1362
Effect of pressure on diffusion in aqueous and alcoholic salt solutions, R. B. Cuddeback and H. G. Drickamer—597
Effect of pressure on diffusion in CS_2 organic mixtures, R. C. Koeller and H. G. Drickamer—575
Effect of pressure on diffusion in liquid sulfur, D. R. Cova and H. G. Drickamer—1364
Effect of pressure on diffusion in water and in sulfate solutions, R. B. Cuddeback, R. C. Koeller, and H. G. Drickamer—589
Effect of pressure on self-diffusion in carbon disulfide, R. C. Koeller and H. G. Drickamer—267
Energy difference of rotational isomers of some dihalogenoethanes in the gaseous and liquid states, Kenji Kuratani, Tatsuo Miyazawa, and San-Ichiro Mizushima —1411(L)
Gravitational effects in PVT measurements in the critical region, W. G. Schneider and H. W. Habgood—2080(L)
Green's "correction" of Yvon's dielectric constant formula, William Fuller Brown, Jr.—1121(L)
Hindered molecular rotation in liquid crystals, R. D. Spence H. S. Gutowsky, and C. H. Holm—1891(L)
Hot atom recoils from $C^{12}(\gamma,n)C^{11}$, Frank S. Rowland and W. F. Libby—1493
Infrared spectrum of the H_3O^+ ion in acid hydrates, D. E. Bethell and N. Sheppard—1421(L)
Investigation of rotational isomers with ultrasound, John Karpovich—1120(L)
Manometric determination of density of liquid ozone, Callaway Brown and Karl D. Franson—917
Molecular distribution functions in a one-dimensional fluid, Zevi W. Salsburg, Robert W. Zwanzig, and John G. Kirkwood—1098
Molecular sound velocity and molecular compressibility of liquid mixtures, Otohiko Nomoto—950(L)
Neutron diffraction and atomic distribution in liquid lead and liquid bismuth at two temperatures, Paul C. Sharrah, and G. Pedro Smith—228
Note on nature of conduction in liquid iron oxide and iron silicates, M. T. Simnad and G. Derge—933
Radial distribution functions and the equation of state of monatomic fluids, Robert W. Zwanzig, John G. Kirkwood, Kenneth F. Stripp, and Irwin Oppenheim—1268
Raman spectrum of gaseous ethforane, J. Rud Nielsen and C. W. Gullikson—1416(L)
Reaction field of polar liquids, Th. G. Scholte—2087(L)
Refractive index correction in light-scattering measurements, D. J. Meier—1892(L)
Relation between critical temperature and pressure of normal paraffins, Yatendra Pal Varshni—1400(L)
Relation between dynamic viscosity and rigidity, Ali A. K. Ibrahim—1422(L)
Second-order transitions and critical phenomena, Robert L. Scott—209
Semiempirical equation for the vapor pressure of liquids as a function of temperature, Arthur A. Frost and Donald R. Kalkwarf—264
Simplified relation between thermodynamics and molecular distribution functions for a mixture, Bruno H. Zimm—934
Slow neutron cross section of water, Milton Danzker—2089(L)
Solubility diagram and the temperature-composition diagram at atmospheric pressure of the liquid system ozone-oxygen, Hans Joachim Schumacher—1610(L)
Some additional remarks on a hypothesis concerning the critical state, Johan van Dranen—567(L)
Some remarks on the equation of state and the energy of quantum-liquids at the critical point, Johan van Dranen —2095(L)
Statistical mechanical theory of transport processes. VI. A calculation of the coefficients of shear and bulk viscosity of liquids, Robert W. Zwanzig, John G. Kirkwood, Kenneth F. Stripp, and Irwin Oppenheim—2050
Statistical theory of *r*-mer solutions, I. Prigogine, V. Mathot, and N. Trappeniers—560(L)

Liquids (continued)
System NaCl–H_2O at supercritical temperatures and pressures, C. S. Copeland, J. Silverman, and S. W. Benson—12
Theory of radiation chemistry. II. Track effects in radiolysis of water, Aryeh H. Samuel and John L. Magee—1080
Thermal diffusion in binary systems, Stephen Prager and Henry Eyring—1347
Thermodynamical study of the water-triethylamine system, near its lower critical point, A. Bellemans—368(L)
Total energy of substances at the critical point, Johan van Dranen—1404(L)
Ultrasonic absorption in liquid mixtures and structural effects, D. Sette—558(L)
Ultrasonic velocity density, and compressibility of supercooled H_2O and D_2O, R. T. Lagemann, L. W. Gilley, and E. G. McLeroy—819
Use of ultrasonic absorption for the determination of very rapid reaction rates at equilibrium: Application to the liquid phase association of carboxylic acids, Eli Freedman —1784
Vapor heat capacities determined by the use of vapor pressure equations, Gordon M. Barrow—1912
Vapor pressures of the deuteromethanes, George T. Armstrong, F. G. Brickwedde, and R. B. Scott—1297(L)
Volumes of mixing of some nonpolar liquids, R. Thacker and J. S. Rowlinson—2242(L)

Magnetic Resonance
Correlation of proton magnetic resonance chemical shifts with electronegativities of substituents, James N. Shoolery —1899(L)
Dimerization in NaF, P. Kusch—1424(L)
Dissociation, chemical exchange, and the proton magnetic resonance in some aqueous electrolytes, H. S. Gutowsky and A. Saika—1638
Exchange frequency electron spin resonance in ferrites, J. Kaplan and C. Kittel—760(L)
Hindered molecular rotation in liquid crystals, R. D. Spence, H. S. Gutowsky, and C. H. Holm—1891(L)
Hyperfine splittings in the paramagnetic resonances of free radicals, S. I. Weissman, J. Townsend, Donald E. Paul, and G. E. Pake—2227(L)
Investigation of proton magnetic resonance line width of sorbed water, T. M. Shaw and R. H. Elsken—565(L)
Magnetic study on high polymers. I. Diamagnetic anisotropy of natural rubber, Akira Isihara, Hazime Kusumoto, Hiroshi Nagano, and Keichi Oshima—1909
Magnesium oxide phosphor activated by tetravalent manganese, J. S. Prener—160(L)
Model of metal-ammonia solutions, with reference to electron spin resonance experiments, J. Kaplan and C. Kittel—1429
Nuclear magnetic relaxation in viscous liquids, Robert L. Conger—937(L)
Nuclear magnetic resonance signals from a tautomeric mixture, H. S. Jarrett, M. S. Sadler, and J. N. Shoolery— 2092(L)
Nuclear magnetic resonance splittings in weak fields, Warren E. Quinn and Richard M. Brown—1605(L)
Paramagnetic resonance absorption: Hyperfine structure in dilute solutions of hydrazyl compounds, Howard S. Jarrett—761(L)
Paramagnetic resonance absorption in solutions of K and Na in liquid NH_3, Clyde A. Hutchison, Jr., and Ricardo C. Pastor—1959
Paramagnetic resonance hyperfine structure of the free radical $(SO_3)_2NO^-$, B. Smaller and E. L. Yasaitis—1905(L)
Paramagnetism in a thermochromic compound, Walter G. Nielsen and George K. Fraenkel—1619(L)
Proton magnetic resonance experiment on a single crystal of oxalic acid dihydrate, $(COOH)_2 \cdot 2H_2O$, J. Itoh, R. Kusaka, R. Kiriyama, and S. Yabumoto—1895(L)
Proton magnetic resonance line in liquid crystals, R. D. Spence, H. A. Moses, and P. L. Jain—380(L)
Nuclear magnetic resonance multiplets in liquids, H. S. Gutowsky, D. W. McCall, and C. P. Slichter—279
Proton magnetic resonance of the CH_3 group. I. Investigation of six tetrasubstituted methanes, J. G. Powles and H. S. Gutowsky—1695
Proton magnetic resonance of the CH_3 group. II. Solid solutions of *t*-butyl chloride in carbon tetrachloride, J. G. Powles and H. G. Gutowsky—1704
Proton relaxation phenomena in complex ion formation, J. R. Zimmerman—1605(L)
Radiofrequency spectrum of the components of a sodium chloride beam. The dimerization of the alkali halides, Stefan A. Ochs, Robert E. Cote, and P. Kusch—549
Rb^{87} and Cs^{133} magnetic resonance shifts in the solid halides, H. S. Gutowsky and B. R. McGarvey—1423(L)
Temperature variation of the paramagnetic resonance absorption of two free radicals, L. S. Singer and E. G. Spencer—939(L)

Magnetic Susceptibilities
Calculation of the diamagnetic and paramagnetic susceptibility of N_2 by the statistical method, J. V. Bonet and A. V. Bushkovitch—2199
Decomposition of nitrate crystals by ionizing radiations, Gerhart Hennig, Robert Lees, and Max S. Matheson—664
Electronic structure of ferrocene, H. H. Jaffé—156
Lattice parameters and Curie points of unreduced iron catalysts, R. Westrik—2094(L)
High-temperature susceptibility of permanent dipole lattices, Robert Rosenberg and Melvin Lax—424
Interatomic electric quadrupole-quadrupole coupling in salts of cerium, R. Finkelstein and A. Mencher—472
Magnetic properties of some anhydrous chlorides, Norman Elliott—890
Magnetic study on high polymers. I. Diamagnetic anisotropy of natural rubber, Akira Isihara, Hazime Kusumoto, Hiroshi Nagano, and Keichi Oshima—1909
Magnetic susceptibility of certain organic compounds. Part IV. The constitution of *ortho-*, *meta-*, and *para*-nitroanilines, H. Mikhail—1004
Manometric determination of density of liquid ozone, Callaway Brown and Karl D. Franson—917
Model of metal-ammonia solutions, with reference to electron spin resonance experiments, J. Kaplan and C. Kittel—1429
Paramagnetic resonance absorption in solutions of K and Na in liquid NH_3, Clyde A. Hutchison, Jr., and Ricardo C. Pastor—1959
Preliminary magnetic study of purple sulfur, Thomas Freund, Steven Adler, and Calvin Sparrow—180(L)

Mass Spectra
Detection of atoms and free radicals in flames by mass spectrometric techniques, S. N. Foner and R. L. Hudson —1374
Detection of the HO_2 radical by mass spectrometry, S. N. Foner and R. L. Hudson—1608(L)
Direct production of molecular electron spectra using the mass spectrometer, J. D. Morrison—2090(L)
Electron impact studies of the vinyl ion and radical, F. H. Field—1506
Energies of strained carbonium ions, J. L. Franklin and F. H. Field—550
Existence of multiply charged molecular ions of HBr, HCl, and DCl, W. H. Johnston and J. R. Arnold—1499
Formation of negative ions of sulfur hexafluoride, A. J. Hearn and N. V. Hannay—119

Free radicals by mass spectrometry. IV. The rate of combination of methyl radicals, K. U. Ingold and F. P. Lossing—1135
Ionization and dissociation of methyl siloxanes by electron impact, Vernon H. Dibeler, Fred L. Mohler, and R. M. Reese—180(L)
Investigation of the heat of vaporization of carbon, William A. Chupka and Mark G. Inghram—371(L)
Kinetic studies with a fast-scanning mass spectroscope, Edouard G. Leger and Cyrias Ouellet—1310(L)
Mass spectral investigation of "active" nitrogen, D. S. Jackson and H. I. Schiff—2233(L)
Mass spectrum of gallium vapor, Stephen Antkiw and Vernon H. Dibeler—1890(L)
Molecular evaporation of group IVB elements, Richard E. Honig—573(L)
Some aspects of the dissociation of benzene under electronic impact, J. L. Franklin and F. H. Field—2082(L)
Studies of ionization efficiency. Part III. The detection and interpretation of fine structure, J. D. Morrison—1767

Mechanics, Quantum

Addendum: Directed valence as a property of determinant wave functions, Howard K. Zimmerman, Jr., and Pierre Van Rysselberghe—381(L)
A $(K+2)$nd order formula for asymmetry doublets in rotational spectra, Daniel Kivelson—536
Approximate calculation of the benzene self-complex interaction energy at high pressure, Kurt E. Shuler—765(L)
Approximate formulas for many-center integrals in the theory of molecules and crystals, Per-Olov Löwdin—374(L)
Atomic excitation in beta decay, H. M. Schwartz—45
Band structure of graphite, J. L. Carter and J. A. Krumhansl—2238(L)
Collisional excitation of F_2O, Henry Aroeste—870
Conditions for the formation of hydrogen bonds, W. S. Fyfe—2
Crystal momentum as a quantum-mechanical operator, E. N. Adams, II—2013
Distortion of inner shell electrons, John M. Cahill and Charles R. Mueller—1415(L)
Does carbon utilize 3d orbitals in bonding?, H. Jaffé—1893(L)
Effect of 3_p atomic orbital on energy of the double bond, J. S. Dooling—859
Electronic energy levels of molecular oxygen, Alvin Meckler—1750
Electronic states of diatomic molecules: The oxygen molecule, Fausto G. Fumi and Robert G. Parr—1864
Electronic structure of ferrocene, H. H. Jaffé—156
$n-\pi$ emission spectra, C. Reid—1906(L)
π-energy levels of ethylene, Carl M. Moser—2098(L)
Exchange between rotational and translational energy in gas molecules, John C. Berkele—2034
Excited electronic states and molecular vibrations of thiophosgene, Jules Duchesne—548
Forces between hydrogen molecules, Arthur A. Evett and Henry Margenau—958(L)
Free-electron model for discussing reactivity in unsaturated hydrocarbons, Kenichi Fukui, Teijiro Yonezawa, and Chikayoshi Nagata—174(L)
Free-electron network model for conjugated systems. I. Theory, Klaus Ruedenberg and Charles W. Scherr—1565
Free-electron network model for conjugated systems. II. Numerical calculations, Charles W. Scherr—1582
Free-electron network for conjugated systems. III. A demonstration model showing bond order and "free valence" in conjugated hydrocarbons, John R. Platt—1597
Free-electron network model for conjugated systems. IV, Charles W. Scherr—1413(L)
Hindered rotation involving two asymmetric groups, Donald G. Burkhard—1541
Homogeneous gas processes and time dependent perturbation theory, Henry Aroeste—1897(L)
Hyperconjugation in $C_6H_7^+$ and other hydrocarbon ions, Lucy W. Pickett, Norbert Muller, and R. S. Mulliken—1400(L)
Improvement in the π-electron approximation in LCAO MO theory, Rudolph Pariser—568(L)
Interaction of closed shells, H. Margenau and Philip Rosen—394
Interaction with molecular rotation of the nuclear electric quadrupole moments of two nuclei having spins $\frac{3}{2}$, G. Wilse Robinson and C. D. Cornwell—1436
Interactions in vibrating molecules, P. Torkington—83
LCAO self-consistent field calculations of the π-electrons energy levels and electronic structure of fulvene, Gaston Berthier—953(L)
LCAO MO self-consistent field calculation of the ground state of H_2O, Frank O. Ellison and Harrison Shull—1420(L)
Mnemonic device for molecular orbital energies, Arthur A. Frost and Boris Musulin—572(L)
Molecular orbital theory of alternant hydrocarbons, R. B. Potts—758(L)
Molecular-orbital theory of conjugated organic compounds with application to the perturbed benzene ring, Per-Olov Löwdin—496
New relation between potential energy and internuclear distance, Ellis R. Lippincott—2070(L)
Nonadditivity of the repulsive potential of helium, Philip Rosen—1007
Non-adiabatic transitions, Henry Aroeste—181(L)
Note on the generalized free-electron model of conjugated polycyclic hydrocarbons, J. Stanley Griffith—174(L)
Note on the quantum-mechanical calculation of reaction rates, Sidney Golden—2071(L)
One-dimensional wave equation for hydrogen bonds, Christer E. Nordman and William N. Lipscomb—2077(L)
Perturbations on exciton states in molecular crystals, Harvey Winston—170(L)
Possible microwave absorption in the molecules belonging to the point groups $D_{2d} \equiv V_d$ and T_d, Masataka Mizushima and Putcha Venkateswarlu—705
Quantum-mechanical calculation of reaction rates: A reply to the preceding note, E. Bauer and Ta-You Wu—2072(L)
Quantum-mechanical calculation of the rates of some chemical reactions, E. Bauer and Ta-You Wu—726
Quantum-mechanical treatment of virial coefficient, John E. Kilpatrick—274
Quantum mechanics of collisions between diatomic molecules, C. F. Curtiss—2045
Relative energies of polar and nonpolar valence bond functions and molecular orbital method. I, Max Wolfsberg—943(L)
Semi-empirical theory of the electronic spectra and electronic structure of complex unsaturated molecules. I, Rudolph Pariser and Robert G. Parr—466
Semi-empirical theory of electronic spectra and electronic structure of complex unsaturated molecules. II, Rudolph Pariser and Robert G. Parr—767
Separation of the rotational coordinates from the N-particle Schroedinger equation, II, C. F. Curtiss—1199
Solutions of sodium in liquid ammonia, William N. Lipscomb—52
Some overlap integrals involving d orbitals, H. H. Jaffé—258
Stability of metallo-organic compounds, H. H. Jaffé and G. O. Doak—196

Mechanics, Quantum (continued)
Studies in molecular orbital theory of valence. II. The transition state in Walden inversion type reaction, H. H. Jaffé—1618(L)
Study of three-center integrals useful in molecular quantum mechanics, Roland S. Barker and Henry Eyring—912
Table of Bessel functions, C. W. Jones—1120(L)
Theoretical considerations concerning Hammett's equation. IV. Calculation of σ values, H. H. Jaffé—415
Theory of stark effect of asymmetric rotator with hyperfine structure, Masataka Mizushima—539
Unified orbital theory of the excited states of the fluorine molecule, Charles R. Mueller—1013
United-atom treatment of conjugated systems, R. D. Brown and F. A. Matsen—1298(L)
United atom treatment of H_2, F. A. Matsen—928
Use of a single scale factor in atomic wave functions. I., Charles W. Scherr—1237
Use of a single scale factor in atomic wave functions. II. Application to overlap integrals, Charles W. Scherr—1241
Use of 3d orbitals in bonding by carbon, R. J. Gillespie—1893(L)
Use of free electron model wave functions in the derivation and representation of LCAO MO wave functions of conjugated molecules, H. H. Jaffé—1287

Mechanics, Statistical
Application of Fermi-Thomas model in computing dipole moment of iodine chloride, Herbert Glazer and Howard Reiss—903
Application of the cell method to r-mer liquids, I. Prigogine, N. Trappeniers, and V. Mathot—559(L)
Application of the cell method to the statistical thermodynamics of solutions. II. Experimental, V. Mathot and A. Desmyter—782
Application of the cell method to the statistical thermodynamics of solutions. III. Critical solutions phenomena, A. Bellemans—369(L)
Application of the cell model to the statistical thermodydynamics of solutions. Volume change of mixing in solutions of molecules slightly different in size, I. Prigogine and A. Bellemans—561(L)
Chemical effects due to the ionization of impurities in semiconductors, Howard Reiss—1209
Cooperative orientation in solutions. The accuracy of the quasi-chemical approximation, J. A. Barker—1391
Dielectric constant theory for polar liquids, William Fuller Brown, Jr.—1327
Dielectric polarization in polar substances, Frank E. Harris and Berni J. Alder—1031
Energy exchange in molecular collisions, Benjamin Widon and S. H. Bauer—1670
Equation of state calculations by fast computing machines, Nicholas Metropolis, Arianna W. Rosenbluth, Marshall N. Rosenbluth, Augusta H. Teller, and Edward Teller—1087
Excluded volume in polymer chains, B. H. Zimm, W. H. Stockmayer, and M. Fixman—1716
Heat capacity of chain polymeric crystals, W. H. Stockmayer and C. E. Hecht—1954
High-temperature susceptibility of permanent dipole lattices, Robert Rosenberg and Melvin Lax—424
Influence of nonrandomness of mixing in the cell model of solutions, I. Sarolea—182(L)
Interactions of randomly disordered molecules, Masao Atoji and William N. Lipscomb—1480
Lattice vibration specific heat of graphite, J. Krumhansl and H. Brooks—1663
Mean dimensions of rubber-like polymer molecules, Frederick T. Wall—1914
Molecular distribution functions in a one-dimensional fluid, Zevi W. Salsburg, Robert W. Zwanzig, and John G. Kirkwood—1098
Negative cluster concentrations, John E. Kilpatrick—1366
Negative cluster concentrations and association constants, Harvey Winston—2245(L)
Pair distribution function for a one-dimensional gas, Robert L. Sells, C. W. Harris, and Eugene Guth—1422(L)
Partition functions for relating entropy to disorder in the melting of pure metals, John F. Lee—382(L)
Pressure virial coefficients in terms of cluster integrals, William E. Putnam and John E. Kilpatrick—1112(L)
Radial distribution functions and the equation of state of monatomic fluids, Robert W. Zwanzig, John G. Kirkwood, Kenneth F. Stripp, and Irwin Oppenheim—1268
Random walk theory of one-dimensional gases, C. W. Harris, Robert L. Sells, and Eugene Guth—1617(L)
Simplified relation between thermodynamics and molecular distribution functions for a mixture, Bruno H. Zimm—934
Some theorems in the theory of Brownian motion which apply to the excluded volume problem in polymer chains, Robert J. Rubin—2073(L)
Specific molar quantities in the cell model of solutions, J. Nasielski—184(L)
Statistical mechanical theory of transport processes. VI. A calculation of the coefficients of shear and bulk viscosity of liquids, Robert W. Zwanzig, John G. Kirkwood, Kenneth F. Stripp, and Irwin Oppenheim—2050
Statistical mechanics of polymer adsorption, H. L. Frisch, Robert Simha, and F. R. Eirich—365(L)
Statistical theory of order-disorder equilibrium at high temperatures, Philip Schwed and Gerhart Groetzinger—963
Statistical theory of r-mer solutions, I. Prigogine, V. Mathot, and N. Trappeniers—560(L)
Statistical thermodynamics of rubber elasticity, Hubert M. James and Eugene Guth—1039
Surface migration of water molecules in ice, E. J. Murphy—1831
Temperature independent factor in the relative rates of isotopic three-center reactions, Jacob Bigeleisen and Max Wolfsberg—1972
Theory of cooperative phenomena. III. Detailed discussions of the cluster variation method, Michio Kurata, Ryoichi Kikuchi, and Tatsuro Watari—434
Theory of reaction rates, Peter T. Landsberg—2228(L)
Theory of the virial development of the equation of state of monoatomic gases, R. J. Riddell, Jr., and G. E. Uhlenbeck—2056
Thermodynamic functions from Mayer's theory of ionic solutions. I. Equations for thermodynamic functions, Jacques C. Poirier—965
Thermodynamic functions from Mayer's theory of ionic solutions. II. The stoichiometric mean ionic molar activity coefficient, Jacques C. Poirier—972
Vibration spectrum of a simple cubic lattice, Gordon F. Newell—1877
Volume exclusion effect in flexible chains, Hubert M. James—1628
X-ray scattering from a "free-volume" liquid, Louis H. Lund—1772

Metals
Acoustic wave velocities, elastic constants, and Debye characteristics temperature for polycrystalline $MgCd^1$, Charles S. Smith and W. E. Wallace—1120(L)
Charge-transfer no-bond adsorption of inert atoms or molecules on metals, J. C. P. Mignolet—1298(L)
Correlation of solid metal and non-electrolyte solubilities, Peter L. Auer—1113(L)
Distribution of solute in crystals grown from the melt. Part I. Theoretical, J. A. Burton, R. C. Prim, and W. P. Slichter—1987
Distribution of solute in crystals grown from the melt. Part II. Experimental, J. A. Burton, E. D. Kolb, W. P. Slichter, and J. D. Struthers—1991

Field emission from nickel surfaces, Robert Gomer—293
Kinetics of the disorder-order transformation in Cu_3Au, Norman W. Lord—692
Lattice dynamics of body-centered and face-centered cubic metallic elements, Jules de Launay—1975
Linear film growth in tarnishing reactions, R. C. Williams and P. R. Wallace—1294(L)
Note on field emission, Robert Gomer—764(L)
Note on work functions and chemical potentials, Pierre Van Rysselberghe—1550
Partition functions for relating entropy to disorder in the melting of pure metals, John F. Lee—382(L)
Solubility of hydrogen in certain liquid metals, Y. L. Yao —1308(L)
Some properties of sodium and potassium near their melting points, L. G. Carpenter—2244(L)
Statistical theory of order-disorder equilibrium at high temperatures, Philip Schwed and Gerhart Groetzinger—963
Thermal expansion of zirconium between 298°K and 1600°K, Gordon B. Skinner and Herrick L. Johnston—1383
Work function in field emission. Chemisorption, Robert Gomer—1869

Microwave (see **Absorption Spectra**)

Molecular Films (see **Surface Phenomena**)

Molecular Spectra (see **Absorption Spectra and Fluorescence**)

Molecular Structure and Constants (see also **Absorption Spectra, Electron and X-ray Diffraction**)
Absorption of 3.3-cm microwaves in chloroform and ethylene dichloride in the liquid state, S. C. Sirkar and D. K. Ghosh—1614(L)
Absorption spectrum of free HCO radicals, D. A. Ramsey —960(L)
Aid in the determination of internal parameters from rotational constants for polyatomic molecules, Daniel Kivelson and E. Bright Wilson, Jr.—1236
Application of the Fermi-Thomas method to molecules, W. A. Bowers—1117(L)
Application of Fermi-Thomas model in computing dipole moment of iodine chloride, Herbert Glazer and Howard Reiss—903
Application of perturbation theory to the *F* and *G* matrix method of calculating molecular vibration frequencies, P. W. Higgs—1131
Approximate formulas for many-center integrals in the theory of molecules and crystals, Per-Olov Löwdin— 374(L)
Assignment of the O—H deformation frequency, James R. Quinan and Stephen E. Wiberley—1896(L)
The assignments of the Raman and infrared frequencies of 1,2-dichloroethane observed in the gaseous, liquid and solid states, Ichiro Nakagawa and San-Ichiro Mizushima —2195
Asymmetric internal rotational barriers about single bonds, N. W. Luft—179(L)
Bipyramidal XY_5 molecular model. Part I. Classical vibration problem, Joseph S. Ziomek and Cecil B. Mast—862
Bond energies and bond distances of hydrocarbons, George Glockler—1242
Bond moments and derivatives in CF_4, SiF_4, and SF_6 from infrared intensities, P. N. Schatz and D. F. Hornig—1516
Bromination of hydrocarbons. VI. Photochemical and thermal bromination of toluene. Bond dissociation energies, Herbert T. Anderson, Jr., Harold A. Scheraga, and Ervin R. VanArtsdalen—1258
Calculation of the diamagnetic and paramagnetic susceptibility of N_2 by the statistical method, J. V. Bonet and A. V. Bushkovitch—2199
Calculation of the heats of formation of gaseous free radicals and ions, J. L. Franklin—2029
Carbon-carbon bond dissociation energies in the cycloalkanes, Frank H. Seubold, Jr.—1616(L)
Centrifugal distortion effects in methyl chloride, Tsu-Shen Chang and David M. Dennison—1293(L)
Charge on combining hydrogen atoms, R. T. Sanderson— 1112(L)
Classical limit of mean thermal vibration amplitudes, J. C. Decius—1121(L)
Configurations of rotational isomers and their normal frequencies, San-Ichiro Mizushima, Takehiko Shimanouchi, Ichiro Nakagawa, and Akihisa Miyake—215
Contribution to the theory of light absorption of symmetrical polymethine dyes, Kenichi Fukui, Chikayoshi Nagata, and Teijiro Yonezawa—186(L)
Conjugated systems, Charles W. Scherr—1582
Conjugation and the intensity of the infrared carbonyl band, Gordon M. Barrow—2008
Correlation of proton magnetic resonance chemical shifts with electronegativities of substituents, James N. Shoolery—1899(L)
Crystal and molecular structure of tetraborane, Christer E. Nordman and William N. Lipscomb—1856
Crystal structure of silanols and their infrared spectra, Masao Kakudo, P. Nobutami Kasai, and Takeo Watase —1894(L)
Crystal structure of the normal paraffin hydrocarbons, A. E. Smith—2229(L)
Dimerization in NaF, P. Kusch—1424(L)
Dipole moments of gaseous thallous halides, Aubrey P. Altshuller—2074(L)
Direct production of molecular electron spectra using the mass spectrometer, J. D. Morrison—2090(L)
Dissociation energy of oxygen, P. Brix and G. Herzberg —2240(L)
Does carbon utilize 3d orbitals in bonding?, H. Jaffé— 1893(L)
Electric dipole moments of several molecules from the stark effect, S. N. Ghosh, Ralph Trambarulo, and Walter Gordy—308
Electronic energy levels of molecular oxygen, Alvin Meckler —1750
Electronic states of diatomic molecules: The oxygen molecule, Fausto G. Fumi and Robert G. Parr—1864
Electronic structure and polarity of the water molecule, J. A. Pople—2234(L)
Electron impact studies of the vinyl ion and radical, F. H. Field—1506
Empirical considerations of entropy. III. A structural approach to the entropies of aqueous organic solutes and complex ions, James W. Cobble—1451
Energies of strained carbonium ions, J. L. Franklin and F. H. Field—550
Energy difference of rotational isomers of some dihalogenoethanes in the gaseous and liquid states, Kenji Kuratani, Tatsuo Miyazawa, and San-Ichiro Mizushima—1411(L)
Energy exchange in molecular collisions, Benjamin Widom and S. H. Bauer—1670
Evidence for globulite molecules in ribonuclease, Dorothy Wrinch—2099(L)
Excited electronic states and molecular vibrations of thiophosgene, Jules Duchesne—548
Existence of multiply charged molecular ions of HBr, HCl, and DCl, W. H. Johnston and J. R. Arnold—1499
Experimental evidence of restricted rotation in $CH_3-C\equiv C-CF_3$, Børge Bak, Lise Hansen, and John Rastrup-Andersen—1612(L)
Free-electron model for discussing reactivity in unsaturated hydrocarbons, Kenichi Fukui, Teijiro Yonezawa, and Chikayoshi Nagata—174(L)
Free-electron network for conjugated systems. III. A demonstration model showing bond order and "free valence" in conjugated hydrocarbons, John R. Platt—1597
Free-electron network model for conjugated systems. II. Numerical calculations, Charles W. Scherr—1582

Molecular Structure and Constants (continued)
Free-electron network model for conjugated systems. IV, Charles W. Scherr—1413(L)
Fundamental absorption bands in the infrared spectrum of phosphine, V. M. McConaghie and H. H. Nielsen—1836
Fundamental absorption bands in the infrared spectrum of stibine and deuterated stibine, W. H. Haynie and H. H. Nielsen—1839
ν_9 Fundamental of C_2F_6, D. E. Mann and Earle K. Plyler —1116(L)
Gases. Part IV. Ozone, Yoshio Tanaka, Edward C. Y. Inn, and K. Watanabe—1651
Geometry of ketene, William F. Arendale and William H. Fletcher—1898(L)
Ground and excited electronic states and the molecular vibrations of some polyatomic molecules, Jules Duchesne and Louis Burnelle—2005
Heat of sublimation of tin and the dissociation energy of SnO, Leo Brewer and Richard F. Porter—2012
Hindered rotation involving two asymmetric groups, Donald G. Burkhard—1541
Hyperfine splittings in the paramagnetic resonances of free radicals, S. I. Weissman, J. Townsend, Donald E. Paul, and G. E. Pake—2227(L)
Importance of $\nu_{11}e_{12}$ (849) vibration of benzene in determining the structure of monosubstituted benzenes, Satya Narain Garg—1907(L)
Infrared and raman spectra of fluorinated ethanes. V. The series CF_3CF_3, CF_3CF_2Cl, CF_3CFCl_2, and CF_3CCl_3, J. Rud Nielsen, C. Y. Liang, R. M. Smith, and D. C. Smith —383
Infrared and Raman spectra of fluorinated ethanes. VI. The series CF_3CH_3, CF_3CH_2Cl, CF_3CHCl_2, and CF_3CCl_3, J. Rud Nielsen, C. Y. Liang, and D. C. Smith—1060
Infrared and Raman spectra of fluorinated ethanes. VII. CCl_3CF_2Cl and CCl_3CFCl_2, J. Rud Nielsen, C. Y. Liang, D. C. Smith, and Morris Alpert—1070
Infrared and Raman spectra of tetramethylmethane-d_{12}. E. R. Shull, T. S. Oakwood, and D. H. Rank—2024
Infrared intensity measurements on nitric oxide, hydrogen chloride, and hydrogen bromide, S. S. Penner and D. Weber—649
Infrared spectra and structure of uranyl and transuranium (V) and (VI) ions in aqueous perchloric acid solution, Llewellyn H. Jones and Robert A. Penneman—542
Infrared spectra and the molecular structure of pyramidal molecules, Harald H. Nielsen—142
Infrared spectra of tetranitromethane, P. H. Lindenmeyer and P. M. Harris—408
Infrared spectra of the methyl chlorosilanes, A. Lee Smith —1997
Infrared spectroscopic study of the carbonyl stretching frequency in a group of *ortho* and *para* quinones, Marie-Louise Josien, Nelson Fuson, Jeanne-Marie Lebas, and Thomas M. Gregory—331
Infrared spectrum of dimethyltriacetylene, Alfons Weber, Salvador Ferigle, and Forrest F. Cleveland—1613(L)
Interactions in vibrating molecules, P. Torkington—83
Interaction with molecular rotation of the nuclear electric quadrupole moments of two nuclei having spins $\frac{3}{2}$, G. Wilse Robinson and C. D. Cornwell—1436
Internal rotation in sulphur monochloride, N. W. Luft and K. H. Todhunter—2225(L)
Ionic hydration and Stokes' law, Arthur L. Levy—566(L)
K fine structure in the $2\nu_1$ band of CHD_3, T. A. Wiggins, E. R. Shull, Jean M. Bennett, and D. H. Rank—1940
Kinetic evidence for the gas-phase existence of the peroxy radicals NO_4 and NO_3, Richard A. Ogg, Jr.—2079(L)
Lifetime of the $^3\Sigma\mu^+$ state of nitrogen, E. E. Muschlitz, Jr., and L. Goodman—2213
Magnetic susceptibility of certain organic compounds. Part IV. The constitution of *ortho-*, *meta-*, and *para*-nitroanilines, H. Mikhail—1004
Mass spectral investigation of "active" nitrogen, D. S. Jackson and H. I. Schiff—2233(L)
Mass spectrum of gallium vapor, Stephen Antkiw and Vernon H. Dibeler—1890(L)
Mean amplitudes of thermal vibrations in polyatomic molecules. II. An approximate method for calculating mean square amplitudes, Yonezo Morino, Kôzo Kuchitsu, Akira Takashi, and Keiji Maeda—1927
Mean dimensions of rubber-like polymer molecules, Frederick T. Wall—1914
Mechanism of acetone vapor fluorescence, Harold J. Groh, Jr., G. W. Luckey, and W. Albert Noyes, Jr.—115
Method for computing zero-point energies, P. W. Higgs —1300(L)
Methyl alcohol molecule and its microwave spectrum, Eugene V. Ivash and David M. Dennison—1804
Microwave investigation of pyridine, Børge Bak and John Rastrup-Andersen—1305(L)
Microwave spectrum and general properties of ethylene imine, W. S. Wilcox, K. C. Brannock, W. DeMore, and J. H. Goldstein—563(L)
Microwave spectrum and dipole moment of ethylenimine, Russell D. Johnson, Rollie J. Myers, and William D. Gwinn—1425(L)
Microwave spectra and molecular structures of $HSiCl_3$, CH_3SiCl_3, and $(CH_3)_3SiCl$, Richard C. Mockler, Jep H. Bailey, and Walter Gordy—1710
Microwave spectrum and molecular structure of trichloro germane, Putcha Venkateswarlu, Richard C. Mockler, and Walter Gordy—1713
Microwave spectrum and structure of chlorine trifluoride, D. F. Smith—609
Microwave spectrum and structure of ozone, Richard H. Hughes—959(L)
Microwave spectrum and structure of SiD_3Cl, Børge Bak, Jørgen Bruhn, and John Rastrup-Andersen—753(L)
Microwave spectrum and structure of SiD_3F, Børge Bak, Jørgen Bruhn, and John Rastrup-Andersen—752(L)
Microwave spectrum of arsenic trifluoride, P. Kisliuk and S. Geschwind—828
Microwave spectrum of $C_8H_{13}Br$ and $C_8H_{13}Cl$, A. H. Nethercot, Jr., and A. Javan—363
Microwave spectrum of HDO, D. W. Posener and M. W. P. Strandberg—1401
Microwave spectrum of phosgene, G. Wilse Robinson—1741
Microwave spectrum of pyridine, K. E. McCulloh and Gilbert F. Pollnow—2082(L)
Mnemonic device for molecular orbital energies, Arthur A. Frost and Boris Musulin—572(L)
Molecular constants of cesium chloride by the molecular beam electric resonance method, R. G. Luce and J. W. Trischka—105
Molecular-orbital theory of conjugated organic compounds with application to the perturbed benzene ring, Per-Olov Löwdin—496
Molecular size distribution in the copolymerization of *N*-carboxyamino acid anhydrides, Louis Gold—1190
Molecular species evaporating from a carbon surface, William A. Chupka and Mark G. Inghram—1313(L)
Molecular structure, dipole moment, and *g* factor of ozone from its microwave spectrum, R. Trambarulo, S. N. Ghosh, C. A. Burrus, Jr., and W. Gordy—851
Molecular structure of B_4Cl_4, Masao Atoji and William N. Lipscomb—172(L)
Molecular structure of B_5H_{11}, Louis R. Lavine and William N. Lipscomb—2087(L)
Molecular structure of carbon tetrafluoride, C. W. W. Hoffman and R. L. Livingston—565(L)

Natural hypsochromic shifts on phenyl substitution, B. Pullman, G. Berthier, and J. Baudet—188(L)
Nature of the hydrogen bridge, R. T. Sanderson—571(L)
Neutron diffraction study of the NaCl-type modification of ND_4Br and ND_4I, Henri Levy and S. W. Peterson—366(L)
New infrared-investigations in the *cis-trans* isomerism of *ortho*-halogenphenols, G. Rossmy, W. Lüttke, and R. Mecke—1606(L)
New relation between potential energy and internuclear distance, Ellis R. Lippincott—2070(L)
Normal coordinate analysis of CF_3CH_3 based on a Urey-Bradley potential function, Chi Yuan Pan and J. Rud Nielsen—1426(L)
Normal coordinate analysis of nonplanar vibrations of 1,3,5-trifluorobenzene, Eldon Ferguson—886
Normal coordinate treatment of diacetylene, Salvador M. Ferigle and Alfons Weber—722
Note on the generalized free-electron model of conjugated polycyclic hydrocarbons, J. Stanley Griffith—174(L)
Nuclear magnetic resonance signals from a tautomeric mixture, H. S. Jarrett, M. S. Sadler, and J. N. Shoolery—2092(L)
Nuclear quadrupole resonance of bromine in molecular solids, S. Kojima, K. Tsukada, S. Ogawa, and A. Shimauchi—1415(L)
Out-of-plane deformation frequency of the NH group in the peptide link, H. K. Kessler and G. B. B. M. Sutherland—570(L)
Ozone band at 1110 cm^{-1}, J. N. Howard and J. H. Shaw—558(L)
Photolysis of mercury dimethyl in the presence of hydrocarbons, Richard E. Robbert and E. W. R. Steacie—1723
Polarizability and configuration of *n* paraffins, Richard S. Stein—1193
Polarizability of the hydride ion and the dipole moments and binding energies of the alkali metal hydrides, Aubrey P. Altshuller—2074(L)
Polarized infrared spectrum of $KAu(CN)_2$, Llewellyn H. Jones—1891(L)
Potential function of ethylene, Bryce L. Crawford, Jr., John E. Lancaster, and Richard G. Inskeep—678
Preliminary analysis of the microwave spectrum of ethylenimine, T. E. Turner, Verna C. Fiora, W. M. Kendrick, and B. L. Hicks—564(L)
Proton magnetic resonance experiment on a single crystal of oxalic acid dihydrate, $(COOH)_2 \cdot 2H_2O$, J. Itoh, R. Kusaka, R. Kiriyama, and S. Yabumoto—1895(L)
Proton magnetic resonance line in liquid crystals, R. D. Spence, H. A. Moses, and P. L. Jain—380(L)
Proton magnetic resonance of the CH_3 group. I. Investigation of six tetrasubstituted methanes, J. G. Powles and H. S. Gutowsky—1695
Proton magnetic resonance of the CH_3 group. II. Solid solutions of *t*-butyl chloride in carbon tetrachloride, J. G. Powles and H. G. Gutowsky—1704
Pure quadrupole spectra: alkyl bromides and iodides, Henry Zeldes and Ralph Livingston—1418(L)
Pure quadrupole spectra of some nitrochlorobenzenes, T. L. Weatherly and Quitman Williams—2073(L)
Pure quadrupole spectrum of hexachlorobenzene, T. L. Weatherly, E. H. Davidson, and Quitman Williams—761(L)
Raman and infrared spectral data, assignments, potential constants, and calculated thermodynamic properties for oxalyl chloride, Joseph S. Ziomek, Arnold G. Meister, Forrest F. Cleveland, and Charlotte E. Decker—90
Raman frequency of bromine monochloride, H. Stammerich and Roberto Forneris—944(L)
Reaction field of polar liquids, Th. G. Scholte—2087(L)
Reaction of cyclobutane with $Hg6(^3P_1)$ atoms, D. L. Kantro and H. E. Gunning—1797
Relative energies of polar and nonpolar valence bond functions and molecular orbital method. I, Max Wolfsberg—943(L)
Relative energies of polar and nonpolar valence bond functions and molecular orbital method. II, Max Wolfsberg 943(L)
Resonance energies of benzene and butadiene, George Glockler—1249
Rotational isomerism in chloroacetone, San-Ichiro Mizushima, Takehiko Shimanouchi, Tatsuo Miyazawa, Isao Ichishima, Kenji Kuratani, Ichiro Nakagawa, and Nobuhiko Shido—815
Rotational line-width measurements on NO, HCl, and HBr, D. Weber and S. S. Penner—1503
Rotational Raman spectrum of benzene vapor, B. Stoicheff—1410(L)
Rotational spectrum of ND_3 between 60 and 200 K, Richard E. Stroup, Robert A. Oetjen, and Ely E. Bell—2072(L)
Rotation vibration bands of some symmetric top molecules under high resolution, T. A. Wiggins, E. R. Shull, and D. H. Rank—1368
Rotation-vibration spectra of diatomic and simple polyatomic molecules with long absorbing paths, A. E. Douglas and D. Sharma—448
Rotation-vibration spectra of diatomic and simple polyatomic molecules with long absorbing paths. X. Spectrum of tri-deuteromethane in photographic infrared, L. F. H. Bovey—831
Scattering factors for certain polydisperse systems, Martin Goldstein—1255
Sites of the amino-acid residues on a cyclol model of insulin, Gladys A. Anslow—2083(L)
Slow neutron cross section of water, Milton Danzker—2089(L)
Some aspects of the dissociation of benzene under electronic impact, J. L. Franklin and F. H. Field—2082(L)
Spectrometer for the far infrared and the spectrum of 1,2 dichlorethane, C. R. Bohn, N. K. Freeman, William D. Gwinn, J. L. Hollenberg, and Kenneth S. Pitzer—719
Specific influence of solvents on the infrared spectra of alcohols, Alexander Verrijn Stuart—1115(L)
Structure of B_4Cl_4, George H. Duffey—761(L)
Structure of HNCS from microwave spectra, G. C. Dousmanis, T. M. Sanders, Jr., C. H. Townes, and H. J. Zeiger—1416(L)
Structure of oxalyl chloride, R. E. Kagarise—1615(L)
Structure of phosphine, Marshall H. Sirevitz and Ralph E. Weston, Jr.—898
Structures of the interhalogen compounds. I. Chlorine trifluoride at −120°C, Robinson D. Burbank and Frank N. Bensey—602
Studies of ionization efficiency. Part III. The detection and interpretation of fine structure, J. D. Morrison—1767
Substituted methanes. X. Infrared spectral data, assignments, potential constants, and calculated thermodynamic properties for CF_3Br and CF_3I, Paul R. McGee, Forrest F. Cleveland, Arnold G. Meister, Charlotte E. Decker, and Sidney I. Miller—242
Substituted methanes. XI. Potential constants for CBr_3Cl, Arnold G. Meister and Fred L. Voelz—158
Substituted methanes. XIII. Infrared spectral data and assignments for dibromodifluoromethane, Charlotte E. Decker, Forrest F. Cleveland, and Richard B. Bernstein—189(L)
Substituted methanes. XIV. Vibrational spectra, potential constants, and calculated thermodynamic properties of bromochloromethane, Alfons Weber, Arnold G. Meister, and Forrest F. Cleveland—930

Molecular Structure and Constants (continued)
Substituted methanes. XV. Infrared spectral data, assignments, and calculated thermodynamic properties for fluorotrichloromethane, Richard B. Bernstein, James P. Zietlow, and Forrest F. Cleveland—1778
Substituted methanes. XVI. Vibrational spectra, potential constants, and calculated thermodynamic properties of dibromodifluoromethane, Charlotte E. Decker, Arnold G. Meister, Forrest F. Cleveland, and Richard B. Bernstein —1781
Sum rule for the vibrational frequencies of homologs, H. J. Bernstein and A. D. E. Pullin—2188
Symmetry factoring of the kinetic and potential energy matrices, Bryce Crawford, Jr.—1108
System pyridine-pyrrole and hydrogen bonding, Robert H. Linnell—179(L)
Table of Bessel functions, C. W. Jones—1120(L)
Theory of centrifugal distortion constants of polyatomic rotor molecules, Daniel Kivelson and E. Bright Wilson, Jr.—1229
Theory of the linear viscoelastic properties of dilute solutions of coiling polymers, Prince E. Rouse, Jr.—1272
Theory of the rotational spectra of Allene-type molecules, Masataka Mizushima—1222
Thermal and dielectric properties of crystalline long-chain acetates, R. J. Meakins and Joan W. Mulley—1934
Thermodynamic functions of FCN, N. W. Luft—1900(L)
Triazine. I. Amino triazines, Robert C. Hirt and D. J. Salley—1181
Unified orbital theory of the excited states of the fluorine molecule, Charles R. Mueller—1013
Use of a single scale factor in atomic wave functions. I, Charles W. Scherr—1237
Use of a single-scale factor in atomic wave functions. II. Application to overlap integrals, Charles W. Scherr —1241
Use of free electron model wave functions in the derivation and representation of LCAO MO wave functions of conjugated molecules, H. H. Jaffé—1287
Use of 3*d* orbitals in bonding by carbon, R. J. Gillespie—1893(L)
Vibrational spectra and structure of ferrocene and ruthenocene, Ellis R. Lippincott and Richard D. Nelson—1307(L)
Vibrational spectra and structure of nitrogen tetrasulfide, Ellis R. Lippincott and Marvin C. Tobin—1559
Vibrational spectra of fluorinated aromatics. III. 1,4-difluorobenzene, E. E. Ferguson, R. L. Hudson, J. Rud Nielsen, and D. C. Smith—1457
Vibrational spectra of fluorinated aromatics. IV. 1,2,4,5-tetrafluorobenzene, E. E. Ferguson, R. L. Hudson, J. Rud Nielsen, and D. C. Smith—1464
Vibrational spectra of fluorinated aromatics. V. 1,3-difluorobenzene, E. E. Ferguson, R. L. Collins, J. Rud Nielsen, and D. C. Smith—1470
Vibrational spectra of fluorinated aromatics. VI. Fluorobenzene, D. C. Smith, E. E. Ferguson, R. L. Hudson, and J. Rud Nielsen—1475
Vibrational spectra of fluorinated aromatics. VII. 1,2,4-trifluorobenzene, E. E. Ferguson, R. L. Hudson, J. Rud Nielsen, and D. C. Smith—1727
Vibrational spectra of fluorinated aromatics. VIII 1,4-bis-(trifluoromethyl) benzene, E. E. Ferguson, Louis Mikkelsen, J. Rud Nielsen, and D. C. Smith—1731
Vibrational spectra of fluorinated aromatics. IX. *p*-fluorotoluene, E. E. Ferguson, R. L. Hudson, J. Rud Nielsen, and D. C. Smith—1736
Vibrational spectra of pyridine and pyridine-d_5, Lester Corrsin, B. J. Fax, and R. C. Lord—1170
Vibrational spectrum of chlorotrifluoroethylene, D. E. Mann, N. Acquista, and Earle K. Plyler—1949
Vibration frequencies of halogenated methanes and substitution product rule, Kenneth S. Pitzer and Edward Gelles—855
Vibration-rotation spectrum of D_2O, W. S. Benedict, Norman Gailar, and Earle K. Plyler—1301(L)
Vibration-rotation spectrum of HDO, W. S. Benedict, Norman Gailar, and Earle K. Plyler—1302(L)

Neutron Diffraction
Antiferromagnetic structure in Cr_2O_3, B. N. Brockhouse—961(L)
Neutron diffraction and atomic distribution in liquid lead and liquid bismuth at two temperatures, Paul C. Sharrah and G. Pedro Smith—228
Neutron diffraction study of tetragonal potassium dihydrogen phosphate, S. W. Peterson, Henri A. Levy, and S. H. Simonsen—2084(L)
Neutron diffraction study of the NaCl-type modification of ND_4Br and ND_4I, Henri Levy and S. W. Peterson—366(L)
Structure and residual entropy of ice, R. E. Rundle—1311(L)

Nuclear Quadrupole Resonance
Chlorine pure quadrupole resonances, D. W. McCall and H. S. Gutowsky—1300(L)
Chlorine quadrupole resonances in solids, P. J. Bray and P. J. Ring—2226(L)
Nuclear quadrupole resonance of some metal chlorides and oxychlorides, H. G. Dehmelt—380(L)
Nuclear quadrupole resonance of bromine in molecular solids, S. Kojima, K. Tsukada, S. Ogawa, and A. Shimauchi—1415(L)
Pure quadrupole spectra of some nitrochlorobenzenes, T. L. Weatherly and Quitman Williams—2073(L)
Pure quadrupole spectrum of hexachlorobenzene, T. L. Weatherly, E. H. Davidson, and Quitman Williams—761(L)
Nuclear quadrupole resonance of iodine in molecular solids, S. Kojima, K. Taukada, S. Ogawa, and A. Shimauchi —2237(L)
Pure quadrupole spectra: alkyl bromides and iodides, Henry Zeldes and Ralph Livingston—1418(L)

Phase Transitions
$BaTiO_3$–KF phase diagram, Clarence Karan and Bernard J. Skinner—2225(L)
Partition functions for relating entropy to disorder in the melting of pure metals, John F. Lee—382(L)
Phase equilibrium in the system calcite-aragonite, John C. Jamieson—1385
Statistical theory of order-disorder equilibrium at high temperatures, Philip Schwed and Gerhart Groetzinger —963
Theory of successive rotational transitions in crystals, Theodore J. Krieger and Hubert M. James—176(L)

Phosphors
Atomic mercury as a luminescent activator, J. S. Penner, R. E. Hanson, and F. E. Williams—759(L)
Effects of neutron bombardment on a zinc sulfide phosphor, Alan W. Smith and John Turkevich—367(L)
Electron traps in the thallium-activated potassium chloride phosphor, Peter D. Johnson and Ferd E. Williams—125
Intensification in zinc selenide phosphors, Simon Larach —756(L)
Luminescence and trapping in phosphors containing gallium, Richard H. Bube and Simon Larach—5
Magnesium oxide phosphor activated by tetravalent manganese, J. S. Prener—160(L)
Quenching of organic phosphorescence, M. Koizumi and S. Kato—2088(L)

Some optical properties of potassium iodide-thallium phosphors, Philip H. Yuster and Charles J. Delbecq —892
Theory of sensitized luminescence in solids, D. L. Dexter —839

Photochemistry
Bromination of hydrocarbons VI. Photochemical and thermal bromination of toluene, bond dissociation energies, Herbert R. Anderson, Jr., Harold A. Scheraga, and Ervin R. VanArtsdalen—1258
Chlorine photosensitized isotope exchange between molecular oxygen species, Richard A. Ogg, Jr.—2078(L)
Effect of 1470A irradiation of nitrogen-hydrogen mixtures and of ammonia, M. H. J. Wijnen and H. Austin Taylor —233
Homomolecular exchange of oxygen, W. H. Johnston and C. J. O'Shea—2080(L)
Mechanism of the Hg($^3P_1$) photosensitized decomposition of ethylene, A. G. Mitchell and D. J. Le Roy—2075(L)
Method for determining the quantum yields of reactions initiated by mercury-6($^1P_1$)-atoms, R. A. Uphaus and H. E. Gunning—2229(L)
Moderation of hot methyl radicals in photolysis of methyl iodides, Frank P. Hudson, Russell R. Williams, Jr., and William H. Hamill—1894(L)
Photochemical decomposition of benzene, G. E. Gibson, Norman Blake and Max Kalm—1000
Photochemical decomposition of nitric oxide by absorption in the (0,0) and (1,0)γ bands, Gordon E. Moore, Oliver R. Wulf, and Richard M. Badger—2091(L)
Photochemical enrichment of mercury 202, Murray Zelikoff, Leonard M. Aschenbrand, and Peter H. Wyckoff—376(L)
Photochemical separation of isotopes, Bruce H. Billings, W. J. Hitchcock, and Murray Zelikoff—1762
Photochlorination of methyl chloroformate in the gas phase, J. H. Brandy and D. J. Le Roy—1049
Photo-ionization as an important process in a low frequency electrodeless discharge, A. P. Saxena, M. G. Bhatawdekar, and N. A. Ramaiah—365(L)
Photolysis of acetaldehyde, G. O. Pritchard, H. O. Pritchard, and A. F. Trotman-Dickenson—748(L)
Photolysis of acetaldehyde, R. E. Dodd—748(L)
Photolysis of mercury dimethyl in the presence of hydrocarbons, Richard E. Rebbert and E. W. R. Steacie—1723
Photosensitized oxidation of paraffins, J. A. Gray—1300(L)
Primary photochemical process in bromine, G. B. Kistiakowsky and James C. Sternberg—2218
Quenching of organic phosphorescence, M. Koizumi and S. Kato—2088(L)
Rate of recombination of iodine atoms in solution, Royal Marshall and Norman Davidson—2086(L)
Reaction of cyclobutane with Hg6($^3P_1$) atoms, D. L. Kantro and H. E. Gunning—1797
Reaction of optically excited mercury vapor with oxygen, David H. Volman—2086(L)
Reactions of methyl radicals with the hydrogen isotopes, E. Whittle and E. W. R. Steacie—993
Remarks on mechanism of the Hg($^3P_1$) photosensitized decomposition of ethylene, B. deB. Darwent—2076(L)
Triplet states in solution, George Porter and Maurice W. Windsor—2088(L)

Polymers
Angular distribution of the light scattered by random coils, H. Benoit and Martin Goldstein—947(L)
Anomalous diffusion of acetone into cellulose acetate, F. A. Long, E. Bagley, and J. Wilkens—1412(L)
"Chemical knife"; preservation of ozone for thirty-six days, H. O. Albrecht—1421(L)
Dependence of the intrinsic viscosity sodium poly-acrylate on salt concentration, P. J. Flory, W. R. Krigbaum, and W. B. Shultz—164(L)
Dilute solution hydrodynamic behavior of flexible chain molecules: polymethyl methacrylate, Thomas G. Fox and Leo Mandelkern—187(L)
Dipole loss in polystyrene and derivatives, Edward B. Baker, Robert P. Auty, and Grover J. Ritenour—159(L)
Effects of interactions in real polymer chains, F. Bueche —205
Excluded volume in polymer chains, B. H. Zimm, W. H. Stockmayer, and M. Fixman—1716
Heat capacity of chain polymeric crystals, W. H. Stockmayer and C. E. Hecht—1954
Magnetic study on high polymers. I. Diamagnetic anisotropy of natural rubber, Akira Isihara, Hazime Kusumoto, Hiroshi Nagano, and Keichi Oshima—1909
Mean dimensions of rubber-like polymer molecules, Frederick T. Wall—1914
Molecular configuration of polyelectrolytes, Paul J. Flory —162(L)
Molecular size distribution in the copolymerization of *N*-carboxyamino acid anhydrides, Louis Gold—1190
Molecular theory of stress relaxation in polymeric media, K. W. Scott and R. S. Stein—1281
Raman spectrum of monomeric methyl methacrylate at −180°C, S. C. Sirker and N. K. Roy—938(L)
Scattering factors for certain polydisperse systems, Martin Goldstein—1255
Segmental mobility of polymers near their glass temperature, F. Bueche—1850
Some theorems in the theory of brownian motion which apply to the excluded volume problem in polymer chains, Robert J. Rubin—2073(L)
Statistical mechanics of polymer adsorption, H. L. Frisch, Robert Simha, and F. R. Eirich—365(L)
Statistical theory of crystallite length, Malcolm Dole— 173(L)
Statistical thermodynamics of rubber elasticity, Hubert M. James and Eugene Guth—1039
Stress relaxation in elastomers, A. M. Bueche—614
Studies on the gamma-radiation-induced polymerization of acrylonitrile, Irving A. Berstein, Earle C. Farmer, Walter G. Rothschild, and Florence F. Spalding—1303(L)
Theory of the linear viscoelastic properties of dilute solutions of coiling polymers, Prince E. Rouse, Jr.—1272
Volume effect in polymer chains, T. B. Grimley—185(L)
Volume exclusion effect in flexible chains, Hubert M. James —1628

Predissociation
Photochemical decomposition of nitric oxide by absorption in the (0,0) and (1,0) γ bands, Gordon E. Moore, Oliver R. Wulf, and Richard M. Badger—2091(L)

Proteins
Adsorption on proteins and interactions between protein molecules in solution, Terrell L. Hill—1395
Evidence for globulite molecules in ribonuclease, Dorothy Wrinch—2099(L)
Interpretation of infrared dichroism in fibrous protein structures, R. D. B. Fraser—1511
Rayleigh's ratio for benzene and the problem of absolute light scattering determinations, M. Halwer, G. C. Nutting, and B. A. Brice—1425(L)
Sites of the amino-acid residues on a cyclol model of insulin, Gladys A. Anslow—2083(L)

Quantum Mechanics (see **Mechanics, Quantum**)

Radiation Chemistry
Calorimetric calibration of gamma-ray actinometers, C. J. Hochanadel and J. A. Ghormley—880

Radiation Chemistry (continued)
Decomposition of methanol-C^{14} under the influence of its own radiation, W. J. Skraba, J. C. Burr, Jr., and D. N. Hess—1296
Decomposition of nitrate crystals by ionizing radiations, Gerhart Hennig, Robert Lees, and Max S. Matheson —664
Hydrogen peroxide formation by cobalt gamma-radiation, Thomas J. Sworski—375(L)
Multiple reversible color changes initiated by irradiation at low temperature, Yehuda Hirshberg and Ernst Fischer —1619(L)
Production of iodine from solutions of potassium iodide irradiated with hard x-rays, Everett R. Johnson—1417(L)
Studies on the gamma-radiation-induced polymerization of acrylonitrile, Irving A. Berstein, Earle C. Farmer, Walter G. Rothschild, and Florence F. Spalding—1303(L)
Theory of radiation chemistry: II. Track effects in radiolysis of water, Aryeh H. Samuel and John L. Magee—1080

Radiochemistry
Atomic excitation in beta decay, H. M. Schwartz—45
Comparative retentions of the nuclear isomers of Br^{80} in the propyl bromides, P. C. Capron and E. Crèvecoeur—1843
Distribution of solute in crystals grown from the melt. Part II. Experimental, J. A. Burton, R. D. Kolb, W. P. Slichter, and J. D. Struthers—1991
Hot atom chemistry of the alkyl bromides; absence of effects due to high radiation density; isotope separation in solids, Frank S. Rowland and W. F. Libby—1495
Hot atom recoils from $C^{12}(\gamma,n)C^{11}$, Frank S. Rowland and W. F. Libby—1493
New determination of the half-life of Am^{242m}; the problem of counting short-lived activities, Thomas K. Keenan, Robert A. Penneman, and B. B. McInteer—1802
Preparation of chromium-51 of high specific activity, Garman Harbottle and Alfred G. Maddock—1686
Production of Fe^{59} by the $Co^{59}(n,p)$ reaction in the Brookhaven reactor, Arthur C. Wahl—182(L)
Studies of bond rupture in the decay of RaD as tetramethyl lead, R. R. Edwards, J. M. Day, and R. F. Overman—1555

Raman Spectra
Assignment of the O—H deformation frequency, James R. Quinan and Stephen E. Wiberley—1896(L)
Assignments of the Raman and infrared frequencies of 1,2-dichloroethane observed in the gaseous, liquid and solid states, Ichiro Nakagawa and San-Ichiro Mizushima —2195
Bipyramidal XY_5 molecular model. Part I. Classical vibration problem, Joseph S. Ziomek and Cecil B. Mast—862
Evidence for one-dimensional rotation in NH_4I, R. C. Plumb and D. F. Hornig—1113(L)
Importance of $\nu_{11}e_{12}$ (849) vibration of benzene in determining the structure of monosubstituted benzenes, Satya Narain Garg—1907(L)
Infrared and Raman spectra of dicyanoacetylene, Foil A. Miller and Roy B. Hannan—110
Infrared and Raman spectra of fluorinated ethanes. V. The series CF_3CF_3, CF_3CF_2Cl, CF_3CFCl_2, and CF_3CCl_3, J. Rud Nielsen C. Y. Liang, and R. M. Smith—383
Infrared and Raman spectra of fluorinated ethanes. VI. The series CF_3CH_3, CF_3CH_2Cl, CF_3CHCl_2, and CF_3CCl_3, J. Rud Nielsen, C. Y Liang, and D. C. Smith—1060
Infrared and Raman spectra of fluorinated ethanes. VII. CCl_3CF_2Cl and CCl_3CFCl_2, J. Rud Nielsen, C. Y. Liang, D. C. Smith, and Morris Alpert—1070
Infrared and Raman spectra of SiH_2Cl_2, Janet A. Hawkins and M. Kent Wilson—360
Infrared and Raman spectra of tetramethylmethane-d_{12}, E. R. Shull, T. S. Oakwood, and D. H. Rank—2024
Raman and infrared spectral data, assignments, potential constants, and calculated thermodynamic properties for oxalyl chloride, Joseph S. Ziomek, Arnold G. Meister, Forrest F. Cleveland, and Charlotte E. Decker—90
ν_3 Raman band of ammonia, C. Cumming and H. L. Welsh —1119(L)
Raman frequency of bromine monochloride, H. Stammerich and Roberto Forneris—944(L)
Raman spectra of hexamethyldisilane, Hiromu Murata and Makoto Kumada—945(L)
Raman spectra of vinyl- and dichlorovinyltrichlorosilane, Hiromu Murata—181(L)
Raman spectrum and cathode-luminescence spectrum of aluminum phosphate, B. D. Saksena and L. M. Pant—1414(L)
Raman spectrum of gaseous ethforane, J. Rud Nielsen and C. W. Gullikson—1416(L)
Raman spectrum of oxalyl chloride, B. D. Saksena, R. E. Kagarise, and D. H. Rank—1613(L)
Raman spectrum of monomeric methyl methacrylate at −180°C, S. C. Sirker and N. K. Roy—938(L)
Rotational raman spectrum of benzene vapor, B. Stoicheff —1410(L)
Rotational isomerism in chloroacetone, San-Ichiro Mizushima, Takehiko Shimanouchi, Tatsuo Miyazawa, Isao Ichishima, Kenji Kuratani, Ichiro Nakagawa, and Nobuhiko Shido—815
Statistical interpretation of polarization data in raman spectra, Marvin C. Tobin—1110(L)
Substituted methanes. XVI. Vibrational spectra, potential constants, and calculated thermodynamic properties of dibromodifluoromethane, Charlotte E. Decker, Arnold G. Meister, Forrest F. Cleveland, and Richard B. Bernstein—1781
Substituted methanes XIX. C^{13} isotopic shifts in the vibrational spectrum of methanol, Richard B. Bernstein, James E. Lamport, and Forrest F. Cleveland—1903(L)
Vibrational raman spectrum of gaseous ethylene, B. P. Stoicheff—755(L)
Vibrational spectra and structure of nitrogen tetrasulfide, Ellis R. Lippincott and Marvin C. Tobin—1559
Vibrational spectra of fluorinated aromatics. III. 1,4-difluorobenzene, E. E. Ferguson, R. L. Hudson, J. Rud Nielsen, and D. C. Smith—1457
Vibrational spectra of fluorinated aromatics. IV. 1,2,4,5-tetrafluorobenzene E. E. Ferguson, R. L. Hudson, J. Rud Nielsen, and D. C. Smith—1464
Vibrational spectra of fluorinated aromatics. V. 1,3-difluorobenzene, E. E. Ferguson, R. L. Collins, J. Rud Nielsen, and D. C. Smith—1470
Vibrational spectra of fluorinated aromatics. VI. Fluorobenzene, D. C. Smith, E. E. Ferguson, R. L. Hudson, and J. Rud Nielsen—1475
Vibrational spectra of fluorinated aromatics. VII. 1,2,4-trifluorobenzene, E. E. Ferguson, R. L. Hudson, J. Rud Nielsen, and D. C. Smith—1727
Vibrational spectra of fluorinated aromatics. VIII. 1,4-bis-(trifluoromethyl) benzene, E. E. Ferguson, Louis Mikkelsen, J. Rud Nielsen, and D. C. Smith—1731
Vibrational spectra of fluorinated aromatics. IX. *p*-fluorotoluene, E. E. Ferguson, R. L. Hudson, J. Rud Nielsen, and D. C. Smith—1736
Vibrational spectra of pyridine and pyridine-d_5, Lester Corrsin, B. J. Fax, and R. C. Lord—1170

Reaction Rates (see **Kinetics of Reaction**)

Rotation
Asymmetric internal rotational barriers about single bonds, N. W. Luft—179(L)
Dielectric dispersion in the microwave region of six tetrasubstituted methanes in the solid state, J. G. Powles, D. E. Williams, and C. P. Smyth—136

Evidence for one-dimensional rotation in ammonium iodide, R. C. Plumb and D. F. Hornig—366(L)
Evidence for one-dimensional rotation in NH_4I, R. C. Plumb and D. F. Hornig—1113(L)
Experimental evidence of restricted rotation in $CH_3-C\equiv C-CF_3$, Børge Bak, Lise Hansen, and John Rastrup-Andersen—1612(L)
Hindered molecular rotation in liquid crystals, R. D. Spence, H. S. Gutowsky, and C. H. Holm—1891(L)
Hindered rotation involving two asymmetric groups, Donald G. Burkhard—1541
Interaction with molecular rotation of the nuclear electric quadrupole moments of two nuclei having spins ½, G. Wilse Robinson and C. D. Cornwell—1436
Internal rotation in sulphur monochloride, N. W. Luft and K. H. Todhunter—2225(L)
Millimeter wavelength dispersion of water vapor, George Burnbaum—57
Quantitative studies of apparent rotational temperatures of OH in emission and absorption (spectral lines with Doppler contour), S. S. Penner—31
Theory of successive rotational transitions in crystals, Theodore J. Krieger and Hubert M. James—176(L)

Rotational Isomerism

Configurations of rotational isomers and their normal frequencies, San-Ichiro Mizushima, Takehiko Shimanouchi, Ichiro Nakagawa, and Akihisa Miyake—215
Energy difference of rotational isomers of some dihalogenoethanes in the gaseous and liquid states, Kenji Kuratani, Tatsuo Miyazawa, and San-Ichiro Mizushima—1411
Investigation of rotational isomers with ultrasound, John Karpovich—1120
Rotational isomerism in chloroacetone, Hiko Shimanouchi, Tatsuo Miyazawa, Isao Ichishima, Kenji Kuratani, Ichiro Nakagawa, and Nobuhiko Shido—815

Scattering

Elastic scattering and neutralization of low velocity hydrogen ions in methforane and ethforane, J. H. Simons and C. S. Garber—689

Solutions (see also **Liquids**)

Adsorption on proteins and interactions between protein molecules in solution, Terrell L. Hill—1395
Analytical method of calculating variable diffusion coefficients, Lewis D. Hall—87
Application of cell method to statistical thermodynamics of solutions. II. Experimental, V. Mathot and A. Desmyter—782
Application of the cell method to the statistical thermodynamics of solutions. III. Critical solutions phenomena, A. Bellemans—369(L)
Application of the cell model to the statistical thermodynamics of solutions. Volume change of mixing in solutions of molecules slightly different in size, I. Prigogine and A. Bellemans—561(L)
Calculation of temperature and pressure coefficients of conductivity and ultrasonic effect in dilute electrolytes from Onsager's theory, Sidney Barnartt—908
Cooperative orientation in solutions. The accuracy of the quasi-chemical approximation, J. A. Barker—1391
Correct application of the Gibbs-Helmholtz equation to reversible galvanic cells in which the compositions of some of the phases vary with temperature, R. E. Barieau—1827
Correlation of solid metal and nonelectrolyte solubilities, Peter L. Auer—1113(L)
Dependence of the intrinsic viscosity sodium poly-acrylate on salt concentration, P. J. Flory, W. R. Krigbaum, and W. B. Shultz—164(L)
Determination of the fluorescence lifetimes of dissolved substances by a phase shift method, E. A. Bailey, Jr., and G. K. Rollefson—1315
Dielectric constants of water-ethyl acetate mixtures, A. P. Altshuller—562(L)
Dissociation, chemical exchange, and the proton magnetic resonance in some aqueous electrolytes, H. S. Gutowsky and A. Saika—1638
Diffuse double layer theory for electrolytes of unsymmetrical valence types, David C. Grahame—1054
Diffusion in binary systems, Stephen Prager—1344
Diffusion of iodine in carbon tetrachloride under pressure, E. W. Haycock, B. J. Alder, and J. H. Hildebrand—1601
Dilute solution hydrodynamic behavior of flexible chain molecules: polymethyl methacrylate, Thomas G. Fox and Leo Mandelkern—187(L)
Effect of pressure on diffusion in aqueous and alcoholic salt solutions, R. B. Cuddeback and H. G. Drickamer—597
Effect of pressure on diffusion in water and in sulfate solutions, R. B. Cuddeback, R. E. Koeller, and H. G. Drickamer—589
Effects of interactions in real polymer chains, F. Bueche—205
Electric polarizability of polar ions, Karol J. Mysels—201
Empirical considerations of entropy I. The entropies of the oxy-anions and related species, James W. Cobble—1443
Empirical considerations of entropy. II. The entropies of inorganic complex ions, James W. Cobble—1446
Empirical considerations of entropy. III. A structural approach to the entropies of aqueous organic solutes and complex ions, James W. Cobble—1451
Entropy of aqueous oxy-anions, Robert E. Connick and Richard E. Powell—2206
Influence of nonrandomness of mixing in the cell model of solutions, I. Sarolea—182(L)
Infrared spectra of solutions of iodine, D. L. Glusker, H. W. Thompson, and R. S. Mulliken—1407(L)
Ionic hydration and Stokes' law, Arthur L. Levy—566(L)
Light scattering study of a mixture of CCl_4 and CS_2, Joseph Powers and Richard S. Stein—1611(L)
Model of metal-ammonia solutions, with reference to electron spin resonance experiments, J. Kaplan and C. Kittel—1429
Molal volumes and compressibilities of the system NaCl–H_2O above the critical temperature of water, Sidney W. Benson, Charles S. Copeland, and David Pearson—2208
Molecular configuration of polyelectrolytes, Paul J. Flory—162(L)
Molecular sound velocity and molecular compressibility of liquid mixtures, Otohiko Nomoto—950(L)
New infrared-investigations in the *cis-trans* isomerism of *ortho*-halogenphenols, G. Rossmy, W. Lüttke, and R. Mecke—1606(L)
Paramagnetism in a thermochromic compound, Walter G. Nielson and George K. Fraenkel—1619(L)
Paramagnetic resonance absorption in solutions of K and Na in liquid NH_3, Clyde A. Hutchison, Jr., and Ricardo C. Pastor—1959
Proton magnetic resonance of the CH_3 group. II. Solid solutions of *t*-butyl chloride in carbon tetrachloride, J. G. Powles and H. S. Gutowsky—1704
Proton relaxation phenomena in complex ion formation, J. R. Zimmerman—1605(L)
Quasi-chemical treatment of mixtures of oriented molecules, H. Tompa—250
Rate of recombination of iodine atoms in solution, Royal Marshall and Norman Davidson—2086(L)
Simplified relation between thermodynamics and molecular distribution functions for a mixture, Bruno H. Zimm—934

Solutions (continued)
Solubility diagram and the temperature-composition diagram at atmospheric pressure of the liquid system ozone-oxygen, Hans Joachim Schumacher—1610(L)
Solubility of hydrogen in certain liquid metals, Y. L. Yao —1308(L)
Solution of the Debye-Hückel equations for a polarized electrode, B. Breyer and F. Gutmann—1323
Solutions of fluorocarbons and hydrocarbons; the energy of mixing, Robert Dunlap—1293(L)
Solutions of sodium in liquid ammonia, William N. Lipscomb—52
Some observations on the chemical behavior of iodine at low concentrations, Milton Kahn and Arthur C. Wahl—1185
Specific influence of solvents on the infrared spectra of alcohols, Alexander Verrijn Stuart—1115(L)
Specific molar quantities in the cell model of solutions, J. Nasielski—184(L)
Statistical theory of *r*-mer solutions, I. Prigogine, V. Mathot, and N. Trappeniers—560(L)
Studies on the photovoltaic effect. III. Irvin Levin, Joseph R. Wiebush, Martin B. Bush, and Charles E. White—1654
System pyridine-pyrrole and hydrogen bonding, Robert H. Linnell—179(L)
Theory of the linear viscoelastic properties of dilute solutions of coiling polymers, Prince E. Rouse, Jr.—1272
Thermodynamical study of the water-triethylamine system, near its lower critical point, A. Bellemans—368(L)
Thermodynamic functions from Mayer's theory of ionic solutions. I. Equations for thermodynamic functions, Jacques C. Poirier—965
Thermodynamic functions from Mayer's theory of ionic solutions. II. The stoichiometric mean ionic molar activity coefficient, Jacques C. Poirier—972
Thermodynamics of reversible galvanic cells in which the compositions of some of the phases vary with temperature, J. W. Stout—1829
Transition temperatures in some dihydrogen and dideutero phosphates and arsenates and their solid solutions, C. C. Stephenson, J. M. Corbella, and L. A. Russell—1110(L)
Ultraviolet absorption spectra of uninegative ions, Harold L. Friedman—319
Volume exclusion effect in flexible chains, Hubert M. James—1623
Volumes of mixing of some non-polar liquids, R. Thacker and J. S. Rowlinson—2242(L)
Spectra (see **Absorption Spectra, Fluorescence, Raman Spectra**)
Statistical Mechanics (see **Mechanics, Statistical**)
Surface Phenomena
Accommodation coefficient technique applied to a study of molecular oxygen film on tungsten, John L. Morrison and W. E. Grummitt—654
Adsorption on proteins and interactions between protein molecules in solution, Terrell L. Hill—1395
Adsorption studies on clay minerals. II. A formulation of the thermodynamics of exchange adsorption, George L. Gaines, Jr., and Henry C. Thomas—714
Charge-transfer no-bond absorption of inert atoms or molecules on metals, J. C. P. Mignolet—1298(L)
Comments on the thermal decomposition of ozone, P. Harteck and S. Dondes—2241(L)
Decomposition of ozone on the surface of glass wool, P. Harteck and S. Dondes—2240(L)
Dependence of Joshi effect on electronic part of the discharge current, N. A. Ramaiah, L. R. Ganesan, and K. S. Iyyangar —1160
Dielectric dispersion of water vapor adsorbed on silica gel, Kan-Ichi Kamiyoshi and Takeshi Odake—1295(L)
Diffuse double layer theory for electrolytes of unsymmetrical valence types, David C. Grahame—1054
Distribution of solute in crystals grown from the melt. Part I. Theoretical, J. A. Burton, R. C. Prim, and W. P. Slichter—1987
Effects of electronic charge transfer between adsorbate and solid on chemisorption and catalysis, P. B. Weisz—1531
Energetics of the adsorption process responsible for the Joshi effect, S. R. Mohanty—1908(L)
Equal pressure diffusion in porous substances, J. Hoogschagen—2096(L)
Field emission from nickel surfaces, Robert Gomer—293
Flow of oxide layer during oxidation of copper, Walter J. Moore—1117(L)
Influence of irradiation on discharge current in an ozonizer, S. Deb, A. K. Saha, and M. Ghosh—1486
Investigation of the surface reaction of oxygen with carbon on tungsten with the field emission microscope, Ralph Klein—1177
Kinetics of the heterogeneous parahydrogen conversion, Y. L. Sandler—2243(L)
Limiting thickness of an electrolyzed gas film capable of sustaining a given negative pressure, Lyman J. Briggs—779
Linear film growth in tarnishing reactions, R. C. Williams and P. R. Wallace—1294(L)
Measurement of electrode polarization by current-interrupter method, Sidney Barnartt—2090(L)
Molecular kinetics of hydrogenation and exchange reactions of ethylene at surfaces, Keith J. Laidler, Mary Colman Wall, and Maria Clare Markham—949(L)
Molecular species evaporating from a carbon surface, William A. Chupka and Mark G. Inghram—1313(L)
Note on work functions and chemical potentials, Pierre Van Rysselberghe—1550
Production of Joshi effect under high frequency electric discharge in iodine vapor, N. Subrahmanyam and N. A. Ramaiah—2233(L)
Solution of the Debye-Hückel equations for a polarized electrode, B. Breyer and F. Gutmann—1323
Some thermodynamic properties of methane adsorbed on rutile between 80 and 140°K, E. L. Pace, E. L. Heric, and Kent S. Dennis—1225
Space-charge layer and distribution of lattice defects at the surface of ionic crystals, Kurt Lehovec—1123
Statistical mechanics of polymer adsorption, H. L. Frisch, Robert Simha, and F. R. Eirich—365(L)
Study of the formation of iron percarbide, John J. Mitchell —1153
Surface photoconductivity in cadmium sulfide crystals, Richard H. Bube—1409(L)
Surface migration of water molecules in ice, E. J. Murphy —1831
Transition layers on glass surfaces and their relation to alkali content, Paul Porter Sutton, A. D. Indvk, and W. W. Kriegel—1313(L)
Use of radioactive alpha-recoil in the study of soluble ionized surface layers, Gunnar Aniansson and Nafali H. Steiger—1299(L)
Work function in field emission. Chemisorption, Robert Gomer—1869

Thermal Diffusion
Drickamer's modification of the theory of the thermal diffusion column, Kozo Hirota and Yasushi Kobayashi—246
Intermolecular force constants from thermal diffusion and other properties of gases, B. N. Srivastava and M. P. Madan—807
Temperature dependence of the thermal diffusion ratio, Eugene M. Holleran—1901(L)

Thermal diffusion in binary systems, Stephen Prager and Henry Eyring—1347
Thermal diffusion in isotopic mixtures in the critical region, F. E. Caskey and H. G. Drickamer—153

Thermodynamic Properties

Absorption band-systems of SiO and GeO in the Schumann region, H. C. Rowlinson and R. F. Barrow—378(L)
Acoustic wave velocities, elastic constants, and Debye characteristics temperature for polycrystalline $MgCd^1$, Charles S. Smith and W. E. Wallace—1120(L)
Additive function of critical constants, Shashanka Shekhar Mitra—2234(L)
$BaTiO_3$—KF phase diagram, Clarence Karan and Bernard J. Skinner—2225(L)
Bond energies and bond distances of hydrocarbons, George Glockler—1242
Bromination of hydrocarbons. VI. Photochemical and thermal bromination of toluene. Bond dissociation energies, Herbert T. Anderson, Jr., Harold A. Scheraga, and Ervin R. VanArtsdalen—1258
Calculation of the heats of formation of gaseous free radicals and ions, J. L. Franklin—2029
Calorimetric calibration of gamma-ray actinometers, C. J. Hochanadel and J. A. Ghormley—880
Carbon-carbon bond dissociation energies in the cycloalkanes, Frank H. Seubold, Jr.—1616(L)
Comment on "The accuracy of the Knudsen effusion method for measuring vapor pressures," Charles I. Whitman—1407(L)
Concerning the low-temperature specific heat of tellurium, Warren DeSorbo—764(L)
$C_p - C_v$ in silicon and germanium, M. E. Fine—1427(L)
Critical point and the disturbed rotation of molecules in the liquid state, Johan van Dranen—1404(L)
Critical temperature and boiling point of normal paraffins, Yatendra Pal Varshni—2235(L)
Dielectric polarization and self-ionization in carboxylic acids, Frank E. Harris and Berni J. Alder—1306(L)
Dissociation, chemical exchange, and the proton magnetic resonance in some aqueous electrolytes, H. S. Gutowsky and A. Saika—1638
Dissociation energy of fluorine, Paul W. Gilles and John L. Margrave—381(L)
Dissociation energy of oxygen, P. Brix and G. Herzberg—2240(L)
Dissociation of H_2 and N_2 on tungsten filaments, M. Farber and A. J. Darnell—172(L)
Electron impact studies of the vinyl ion and radical, F. H. Field—1506
Empirical considerations of entropy I. The entropies of the oxy-anions and related species, James W. Cobble—1443
Empirical considerations of entropy. II. The entropies of inorganic complex ions, James W. Cobble—1446
Empirical considerations of entropy. III. A structural approach to the entropies of aqueous organic solutes and complex ions, James W. Cobble—1451
Energy difference of rotational isomers of some dihalogenoethanes in the gaseous and liquid states, Kenji Kuratani, Tatsuo Miyazawa, and San-Ichiro Mizuschima—1411(L)
Entropy and low-temperature heat capacity of neptunium dioxide, Edgar F. Westrum, Jr., J. B. Hatcher, and Darrell W. Osborne—419
Entropy of aqueous oxy-anions, Robert E. Connick and Richard E. Powell—2206
Equilibrium in the exchange of deuterium between ammonia and hydrogen, Morris Perlman, Jacob Bigeleisen, and Norman Elliott—70
Equilibria involving the $CF(g)$ and $CF_2(g)$ radicals at high temperature, John L. Margrave and Karl Wieland—1552
Gravitational effects in PVT measurements in the critical region, W. G. Schneider and H. W. Habgood—2080
Heat capacity and thermal diffusivity of silver bromide, T. E. Pochapsky—1539
Heat capacity of thorium dioxide from 10 to 305°K. The heat capacity anomalies in uranium dioxide and neptunium dioxide, Darrel W. Osborne and Edgar F. Westrum, Jr.—1884
Heat of sublimation of tin and the dissociation energy of SnO, Leo Brewer and Richard F. Porter—2012
Hydrogen-fluorine flame temperatures, David Altman and Milton Farber—1118(L)
Infrared and Raman spectra of fluorinated ethanes. VI. The series CF_3CH_3, CF_3CH_2Cl, CF_3CHCl_2, and CF_3CCl_3, J. Rud Nielsen, C. Y. Liang, and D. C. Smith—1060
Infrared and Raman spectra of fluorinated ethanes. VII. CCl_3CF_2Cl and CCl_3CFCl_2, J. Rud Nielsen, C. Y. Liang, D. C. Smith, and Morris Alpert—1070
Infrared and Raman spectra of SiH_2Cl_2, Janet A. Hawkins and M. Kent Wilson—360
Infrared spectrum of CF_3D, Santiago R. Polo and M. Kent Wilson—1129
Interatomic electric quadrupole-quadrupole coupling in salts of cerium, R. Finkelstein and A. Mencher—472
Investigation of pyrolyses of benzyl benzoate, acetate and formate, M. Szwarc and J. Watson Taylor—1746
Investigation of the heat of vaporization of carbon, William A. Chupka and Mark G. Inghram—371(L)
Investigations on silver sulfide, Carl Wagner—1819
Isotope effect and thermal expansion coefficients of crystals, Christer E. Nordman and William N. Lipscomb—2077(L)
Molal volumes and compressibilities of the system NaCl–H_2O above the critical temperature of water, Sidney W. Benson, Charles S. Copeland, and David Pearson—2208
Molecular evaporation of group IVB elements, Richard E. Honig—573(L)
Molecular species evaporating from a carbon surface, William A. Chupka and Mark G. Inghram—1313(L)
Nature of the gradual transition in sodium borohydride, W. H. Stockmayer and C. C. Stephenson—1311(L)
Normal boiling points of oxygen on the thermodynamic scale, J. G. Aston and G. W. Moessen—948(L)
Note on the vibrational spectra of $SiHCl_3$, SiH_2Cl_2, and SiH_2Br_2, Janet A. Hawkins, Santiago R. Polo, and M. Kent Wilson—1122(L)
Note on work functions and chemical potentials, Pierre Van Rysselberghe—1550
Phase equilibrium in the system calcite-aragonite, John C. Jamieson—1385
Photochemical decomposition of nitric oxide by absorption in the (0,0) and (1,0) γ bands, Gordon E. Moore, Oliver R. Wulf, and Richard M. Badger—2091(L)
Precision measurements of enthalpy of KBr and KI at high temperatures, Charles B. Cooper—777
Quasi-chemical treatment of mixtures of oriented molecules, H. Tompa—250
Raman and infrared spectral data, assignments, potential constants, and calculated thermodynamic properties for oxalyl chloride, Joseph S. Ziomek, Arnold G. Meister, Forrest F. Cleveland, and Charlotte E. Decker—90
Relation between critical temperature and pressure of normal paraffins, Yatendra Pal Varshni—1400(L)
Resonance energies of benzene and buadiene, George Glockler—1249
Second-order transitions and critical phenomena, Robert L. Scott—209
Solubility diagram and the temperature-composition diagram at atmospheric pressure of the liquid system ozone-oxygen, Hans Joachim Schumacher—1610(L)

Thermodynamic Properties (continued)
Solubility of hydrogen in certain liquid metals, Y. L. Yao—1308(L)
Solutions of fluorocarbons and hydrocarbons; the energy of mixing, Robert Dunlap—1293(L)
Some additional remarks on a hypothesis concerning the critical state, Johan van Dranen—567(L)
Some aspects of the dissociation of benzene under electronic impact, J. L. Franklin and F. H. Field—2082(L)
Some theoretical considerations of ether decompositions, B. G. Gowenlock—941(L)
Some thermodynamic properties of methane adsorbed on rutile between 80 and 140°K, E. L. Pace, E. L. Heric, and Kent S. Dennis—1225
Specific heat of crystalline selenium at low temperatures, Warren DeSorbo—1144
Specific heat of diamond at low temperatures, R. Berman and J. Poulter—1906(L)
Specific heat of diamond at low temperatures, Warren DeSorbo—876
Specific heat of graphite from 13° to 300°K, W. DeSorbo and W. W. Tyler—1660
Structure and residual entropy of ice, R. E. Rundle—1311(L)
Substituted methanes. X. Infrared spectral data, assignments, potential constants, and calculated thermodynamic properties for CF_3Br and CF_3I, Paul R. McGee, Forrest F. Cleveland, Arnold G. Meister, Charlotte E. Decker, and Sidney I. Miller—242
Substituted methanes. XIV. Vibrational spectra, potential constants, and calculated thermodynamic properties of bromochloromethane, Alfons Weber, Arnold G. Meister, and Forrest F. Cleveland—930
Substituted methanes. XV. Infrared spectral data, assignments, and calculated thermodynamic properties for fluorotrichloromethane, Richard B. Bernstein, James P. Zietlow, and Forrest F. Cleveland—1778
Substituted methanes. XVI. Vibrational spectra, potential constants, and calculated thermodynamic properties of dibromodifluoromethane, Charlotte E. Decker, Arnold G. Meister, Forrest F. Cleveland, and Richard B. Bernstein—1781
System $NaCl-H_2O$ at supercritical temperatures and pressures, C. S. Copeland, J. Silverman, and S. W. Benson—12
T^2 dependence of the low-temperature specific heat of boron nitride, A. S. Dworkin, D. J. Sasmor, and E. R. Van-Artsdalen—954(L)
T^2 dependence of the low-temperature specific heat of gallium, Warren DeSorbo—168(L)
Thermal expansion of zirconium between 298°K and 1600°K, Gordon B. Skinner and Herrick L. Johnston—1383
Thermodynamical study of the water-triethylamine system, near its lower critical point, A. Bellemans—368(L)
Thermodynamic functions from Mayer's theory of ionic solutions. II. The stoichiometric mean ionic molar activity coefficient, Jacques C. Poirier—972
Thermodynamic functions of FCN, N. W. Luft—1900(L)
Thermodynamic functions of potassium vapor, Maurice Griffel—1908(L)
Total energy of substances at the critical point, Johan van Dranen—1404(L)
Ultrasonic velocity, density, and compressibility of supercooled H_2O and D_2O, R. T. Lagemann, L. W. Gilley, and E. G. McLeroy—819
Use of ultrasonic absorption for the determination of very rapid reaction rates at equilibrium: application to the liquid phase association of carboxylic acids, Eli Freedman—1784
Vapor heat capacities determined by the use of vapor pressure equations, Gordon M. Barrow—1912
Vapor pressures of the deuteromethanes, George T. Armstrong, F. G. Brickwedde, and R. B. Scott—1297(L)
Vibrational spectrum of chlorotrifluorethylene, D. E. Mann, N. Acquista, and Earle K. Plyler—1949
Volumes of mixing of some nonpolar liquids, R. Thacker and J. S. Rowlinson—2242(L)

Thermodynamics
Accuracy of the Knudsen effusion method for measuring vapor pressures, M. G. Rossman and J. Yarwood—1406(L)
Adsorption studies on clay minerals. II. A formulation of the thermodynamics of exchange adsorption, George L. Gaines, Jr., and Henry C. Thomas—714
Application of cell method to statistical thermodynamics of solutions. II. Experimental, V. Mathot and A. Desmyter—782
Application of the cell method to the statistical thermodynamics of solutions. III. Critical solutions phenomena, A. Bellemans—369(L)
Calculation of the heats of formation of gaseous free radicals and ions, J. L. Franklin—2029
Chemical effects due to the ionization of impurities in semiconductors, Howard Reiss—1209
Comment on "The accuracy of the Knudsen effusion method for measuring vapor pressures," Charles I. Whitman—1407(L)
Concerning the low-temperature specific heat of tellurium, Warren DeSorbo—764(L)
Cooperative orientation in solutions. The accuracy of the quasi-chemical approximation, J. A. Barker—1391
Correct application of the Gibbs-Helmholtz equation to reversible galvanic cells in which the compositions of some of the phases vary with temperature, R. E. Barieau—1827
Critical point and the disturbed rotation of molecules in the liquid state, Johan van Dranen—1404(L)
Diffusion in binary systems, Stephen Prager—1344
Dynamics of the graphite lattice, Herbert B. Rosenstock—2064
Effect of isotopic substitution on the entropy, enthalpy, and heat capacity of ideal gases. I. Systems in thermal equilibrium, Jacob Bigeleisen—1333
Empirical considerations of entropy I. The entropies of the oxy-anions and related species, James W. Cobble—1443
Empirical considerations of entropy. II. The entropies of inorganic complex ions, James W. Cobble—1446
Empirical considerations of entropy. III. A structural approach to the entropies of aqueous organic solutes and complex ions, James W. Cobble—1451
Heat capacity of chain polymeric crystals, W. H. Stockmayer and C. E. Hecht—1954
Influence of nonrandomness of mixing in the cell model of solutions, I. Sarolea—182(L)
Interactions of randomly disordered molecules, Masao Atoji and William N. Lipscomb—1480
Lattice dynamics of body-centered and face-centered cubic metallic elements, Jules de Launay—1975
Lattice vibration specific heat of graphite, J. Krumhansl and H. Brooks—1663
Negative cluster concentrations and association constants, Harvey Winston—2245(L)
Note on frequency spectra of simple solids from specific heat data, Jenn Lin Hwang—168(L)
Partition functions for relating entropy to disorder in the melting of pure metals, John F. Lee—382(L)
Quasi-chemical treatment of mixtures of oriented molecules, H. Tompa—250

Radial distribution functions and the equation of state of monatomic fluids, Robert W. Zwanzig, John G. Kirkwood, Kenneth F. Stripp, and Irwin Oppenheim—1268
Second-order transitions and critical phenomena, Robert L. Scott—209
Semiempirical equation for the vapor pressure of liquids as a function of temperature, Arthur A. Frost and Donald R. Kalkwarf—264
Simplified algebraic method for obtaining thermodynamical formulas, Henry A. Bent—1408(L)
Simplified relation between thermodynamics and molecular distribution functions for a mixture, Bruno H. Zimm—934
Solutions of fluorocarbons and hydrocarbons; the energy of mixing, Robert Dunlap—1293(L)
Some remarks on the equation of state and the energy of quantum-liquids at the critical point, Johan van Dranen —2095(L)
Specific molar quantities in the cell model of solutions, J. Nasielski—184(L)
Statistical thermodynamics of rubber elasticity, Hubert M. James and Eugene Guth—1039
Theory of successive rotational transitions in crystals, Theodore J. Krieger and Hubert M. James—176(L)
Thermal diffusion in binary systems, Stephen Prager and Henry Eyring—1347
Thermodynamic functions from Mayer's theory of ionic solutions. I. Equations for thermodynamic functions, Jacques C. Poirier—965
Thermodynamic functions from Mayer's theory of ionic solutions. II. The stoichiometric mean ionic molar activity coefficient, Jacques C. Poirier—972
Thermodynamics of reversible galvanic cells in which the compositions of some of the phases vary with temperature, J. W. Stout—1829
Total energy of substances at the critical point, Johan van Dranen—1404(L)
Vapor heat capacities determined by the use of vapor pressure equations, Gordon M. Barrow—1912
Variational principles for irreversible processes, Philip Rosen—1220

Transference Numbers

Anomalous adjustment of indicator concentration in moving boundary measurements of transference numbers, A. R. Gordon and R. L. Kay—131

Transport Phenomena

Diffusion and thermal diffusion of isotopic gases, Eugene M. Holleran—2184
Energy exchange in molecular collisions, Benjamin Widom and S. H. Bauer—1670
Intermolecular force constants of fluorine, David White, Jih-Heng Hu, and Herrick L. Johnston—1149
Intermolecular force constants from thermal diffusion and other properties of gases, B. N. Srivastava and M. P. Madan—807
Exchange between rotational and translational energy in gas molecules, John C. Berkele—2034
Quantum mechanics of collisions between diatomic molecules, C. F. Curtiss—2045
Separation of the rotational coordinates from the *N*-particle Schroedinger equation, II, C. F. Curtiss—1199
Shape and thickness of shock fronts in argon, hydrogen, nitrogen and oxygen, E. F. Greene and D. F. Hornig—617
Sound dispersion in *cis*- and *trans*-dichloroethylene vapors, M. Boudart—955(L)
Statistical mechanical theory of transport processes. VI. A calculation of the coefficients of shear and bulk viscosity of liquids, Robert W. Zwanzig, John G. Kirkwood, Kenneth F. Stripp, and Irwin Oppenheim—2050
Variational principles for irreversible processes, Philip Rosen—1220

Ultrasonics

Calculation of temperature and pressure coefficients of conductivity and ultrasonic effect in dilute electrolytes from Onsager's theory, Sidney Barnartt—908
Dependence of intensity of sound at source on its absorption coefficient in liquids, S. Parthasarathy, S. S. Chari, and D. Srinivasan—185(L)
Determination of the fluorescence lifetimes of dissolved substances by a phase shift method, E. A. Dailey, Jr., and G. K. Rollefson—1315
Dielectric and ultrasonic relaxation in glycerol, Theodore A. Litovitz and Daniele Sette—17
Exchange between rotational and translational energy in gas molecules, John C. Berkele—2034
Investigation of rotational isomers with ultrasound, John Karpovich—1120(L)
Relationships between kinetics and acoustic phenomena in equilibrium systems, Milton Manes—1791
Sound dispersion in *cis*- and *trans*-dichloroethylene vapors, M. Boudart—955(L)
Ultrasonic absorption in liquid mixtures and structural effects, D. Sette—558(L)
Ultrasonic velocity, density, and compressibility of supercooled H_2O and D_2O, R. T. Lagemann, L. W. Gilley, and E. G. McLeroy—819
Use of ultrasonic absorption for the determination of very rapid reaction rates at equilibrium: Application to the liquid phase association of carboxylic acids, Eli Freedman —1784

Valence (see **Mechanics, Quantum**)

Viscosity

Excluded volume in polymer chains, B. H. Zimm, W. H. Stockmayer, and M. Fixman—1716
Intermolecular force constants of fluorine, David White, Jih-Heng Hu, and Herrick L. Johnston—1149
Nuclear magnetic relaxation in viscous liquids, Robert L. Conger—937(L)
Relation between dynamic viscosity and rigidity, Ali A. K. Ibrahim—1422(L)
Segmental mobility of polymers near their glass temperature, F. Bueche—1850
Statistical mechanical theory of transport processes. VI. A calculation of the coefficients of shear and bulk viscosity of liquids, Robert W. Zwanzig, John G. Kirkwood, Kenneth F. Stripp, and Irwin Oppenheim—2050
System pyridine-pyrrole and hydrogen bonding, Robert H. Linnell—179(L)
Theory of the linear viscoelastic properties of dilute solutions of coiling polymers, Prince E. Rouse, Jr.—1272
Variational principles for irreversible processes, Philip Rosen—1220

X-Ray Diffraction

Crystal structure and lattice energy of orthorhombic hexachloroethane, Yoshio Sasada and Masao Atoji—145
Crystal and molecular structure of tetraborane, Christer E. Nordman and William N. Lipscomb—1856
Crystal structure of diethylsilanediol, and its hydroxyl groups, Masao Kakudo and Takeo Watase—167(L)
Crystal class of Na_2SO_4 III, D. R. Dasgupta—2097(L)
Crystal structure of $KVO_3 \cdot H_2O$, C. L. Christ, Joan R. Clark, and H. T. Evans, Jr.—1114(L)
Crystal structure of silanols and their infrared spectra, Masao Kakudo, P. Nobutami Kasai, and Takeo Watase —1894(L)
Crystal structure of the normal paraffin hydrocarbons, A. E. Smith—2229(L)

X-Ray Diffraction (continued)
Diffuse spots of pyrene at higher temperatures, M. N. Dutt—380(L)
Electron deficient compounds. VII. The structure of the trimethylaluminum dimer, Paul H. Lewis and R. E. Rundle—986
Evidence for globulite molecules in ribonuclease, Dorothy Wrinch—2099(L)
Extra laue reflections of tetraphenylethylene crystal, M. N. Dutt—1609(L)
Lattice parameters and Curie points of unreduced iron catalysts, R. Westrik—2094(L)
Molecular structure of B_4Cl_4, Masao Atoji and William N. Lipscomb—172(L)
Molecular structure of B_5H_{11}, Louis R. Lavine and William N. Lipscomb—2087(L)
New structure type for metallic oxides of formula A_6BO_8, John S. Kasper and C. L. Christ—1897(L)
Phase transformation of cobalt as observed on single crystals, Victor J. Kehrer and Henry Leidheiser, Jr.—570(L)
Structure of B_4Cl_4, George H. Duffey—761(L)
Structures of the interhalogen compounds. I. Chlorine trifluoride at −120°C, Robinson D. Burbank and Frank N. Bensey—602
X-ray scattering from a "free-volume" liquid, Louis H. Lund—1772
